CRY-8, Cryoscope

Features and Benefits:

● Freezing Point Analyzer for Milk

The CRY-8 is a modern digital analyzer for the accurate determination of the freezing point temperature in samples of raw milk or milk products (skimmed, pasteurized or UHT-milk).

The most objective indicator for the degree of falsification of milk by additional water is the raising of the freezing point temperature from $> -0.512^{\circ}\text{C}$. The CRY-8 complies fully with the international standard ISO 5764/2002(E), IDF 108/2002(E) "Milk" – Determination of Freezing Point – Thermistor Cryoscope Method (Reference Method) and Annex C without the necessity to correct the results to the reference method.

The analyzer measures temperatures in the range from below -0.512°C (pure milk) to -0.527°C in increments of 0.001°C .

● Peltier Effect

The measuring principle is the freezing point detection of super cooled liquids based on the Peltier Effect. On the cold side of an Peltier element the milk samples are cooled down below the freezing point in the range 0 to -7°C .

● 1-Point Calibration

One-point calibration –the instrument requires for calibration only one distillation water sample. Measurement corrections are done automatically & entered into

the microprocessor memory. It is an outstanding advantage of the CRY-8, that calibration is performed in ONE POINT ONLY. In comparison with this, competitive analyzers do need 2 or 3 different calibration points.

Once the CRY-8 is calibrated, the CALIBRATION REMAINS STABLE the whole day AS LONG AS THE INSTRUMENT STAYS SWITCHED ON.

● Aqua Dest – Calibration

The CRY-8 does not need expensive calibration solutions except distilled water for the zero point. These features, 1-POINT CALIBRATION and AQUA DEST-CALIBRATION ARE UNIQUE in the market and they CONTRIBUTE TO SAVING LABOR TIME AND COSTS FOR PURCHASE and STORAGE OF EXPENSIVE CALIBRATION STANDARDS.

● 100µl Sample Volume & disposable measuring vessel

Precise measuring results from only 100µl sample make the CRY-8 disposable measuring vessels not require washing and sterilization.

● Easy Operation

After the samples in 1.5ml tubes are inserted into the measuring position the instrument PERFORMS AUTOMATICALLY THE MEASURING PROCEDURE. FUNCTION CONTROL and ERROR IDENTIFICATION are also automatically done by the instrument. High accuracy ($\pm 0.002^{\circ}\text{C}$) and repeatability ($\pm 0.002^{\circ}\text{C}$) of results. Short measuring time ca 1.5 min. Digitally readout of temperature $^{\circ}\text{C}$ and %H₂O with printout. The printer can be adapted via RS 232 data port.

● Simple Installation

The CRY-8 is air cooled and does not need any connection to cooling water.

● Robust Housing

The sheet metal housing with epoxy lacquer paint ensures UTMOST MECHANICAL and CHEMICAL RESISTANCE to the laboratory environment.

● Small Dimensions

Small instrument weight and dimensions, big resistance to vibrations and hard working conditions (humidity max 85%, ambient temp. 36°C) make the CRY-8 from well applicable in stationary and field conditions.

DIST, 1.5 Liter/hour Distillator

Autoclave must adopt distilled water as operation medium.

Even Purified water has various minerals, & can produce furring scale after evaporation at high temperature, which, after a period of time, can lead to leaking of steam due to improper closure. It can also lead to the clog in the narrow pipes and pressure sensor, to the malfunction of temperature sensor and to other failures.

Once the furring scale enters hand piece and other instrument which are hollow inside or has apertures, it will clog the narrow pipes and axis, lowering the turning speed of hand piece, thus reducing its life span. Therefore, using distilled water is necessary.

Comparator is in high degree influenced by external conditions like temperature, breeze & vibrations. For the purpose of proper operation conditions, it is necessary to use the comparator in a room with very precise temperature control (laminar air-conditioning) and place of usage should be free from any vibrations.

Comparators do not undergo Legal Metrological Control. Main criterion if evaluation is repeatability. The software is equipped with application for estimating average deviation by two methods: ABA or ABBA, for maximally 20 repetitions. After running the procedure, the software generates the report with results.

Mass comparators are devices designed for determining the differences between masses of calibration weight (B) and reference weight (A).

Comparators are most often used in measuring laboratories for calibration of weights and masses.

MRC offers comparators designed for calibration of weights and masses class E1, E2, F1, F2, M1 according to OIML R111, with masses from 1mg to 20g with readability 1 μ g.

Comparator MGB-21KO consists of two components.

One of them holds the electronic module, and the other precise mechanical measuring system. Such solution guarantees elimination of temperature influence (warming of electronic elements) on the indications of comparator. Comparator is equipped with big graphic display with user friendly menu. In order to guarantee proper accuracy of measurements, a half-automatic system of external calibration with calibration weight has been applied. Comparator is equipped with esthetic, cylindrical shaped weighing chamber with glass draught shield.

All elements of the weighing chamber are manufactured from glass or metal which minimizes the influence of electrostatic charges on weighing result.

Comparator is equipped with user friendly menu.

The software allows for composition of GLP procedures as standard printout or as freely definable non-standard printout. Each comparator is equipped with Ethernet, RS 232, 2xUSB & possibility of connecting additional display as standard.

- Including table independent bare.
- MDF painted table top.
- Mild steel profiles construction, adjustable height.
- Optional part in stainless and acid-proof construction.
- Table Size: 600Wx770Dx800Hmm, 25kg
- Marble concrete board Size: 270Wx410Dx115mmH, 29kg

Set for determination of water vapor permeability

Permeability of water vapor is a feature which directly determines quality and application of a specific material, for instance cloth, shoes. Improper material if applied, may result in unhealthy or uncomfortable use.

Stand for under hook weighing

Stand for weighing loads in under hook weighing method. Loads are placed on special pan hanged on a hook mounted to the bottom of the scale.

Application:

- Measuring mass of magnetic materials.
- Measuring mass of non-standard dimensions or shapes.
- Determination of density of solids and liquids.
- Size (WxHxD): 330x210x335 mm

SHIELD, Anti draught for Microbalances

Anti-draught chamber is intended for microbalances. It is an optional equipment of microbalances working in unfavorable conditions (air-draughts and breezes). It is mounted on a table, a microbalance is placed inside a chamber. It features sliding side windows allowing for free access into the weighing chamber of a microbalance.

- Internal size (WxHxD): 468x250x250 mm
- External size (WxHxD): 536.5x256x254 mm

The anti draught shield can be used for protecting the weighed objects against external environment, especially wind or breeze in production halls. It is Optional accessories to the balances Series BPS, ASB with pan size 128x128mm.

Protecting the weighed objects against wind has very good influence of measuring results. It eliminates the possibility of vibration of an object caused by external conditions while taking its measurements.

Size (WxHxD): 203x200x264 mm

DENSITY, Cereal Kit

This kit is designed for determination of density of cereals. Measurement of cereal density in loose state is performed with application of precise balance Series BPS-X4500G and density kit for cereals. Density determination result is calculated automatically by balance software (in accordance to tables containing cereal density).

It is possible to determine the density of following cereal: wheat, oats, barley, rye. Its volume is 1 Liter.

The cereal density kit allows for determination of density according to norm: PN-73/R-74007.

BALANCES

Density Kit/Weights Classification

P0180, Density Kit

Determining the density of solids and liquids is an inseparable part of work of the laboratories. Traditional method of density determination requires from the operator many measurements and a lot of complex calculation. In result the operator ends with a density determination result which can be saddled with calculation and systematic errors. Additionally time that needs to be devoted to density calculation is long. In case of determining the density of solids and liquids with application of MRC density determination kit, the whole procedure is very much simplified and speeded up. Time till the operator receives the density measurement is very short, as all the calculation is performed by the software of the weighing instrument, & operator's activities is limited to:

- operation of the keyboard of weighing instrument
- placing the samples on the weighing pans of the kit
- hanging the plunger

Density determination kit is Optional accessories offered to MRC laboratory balances. The software for determination of density has following basic features:

- simplicity of usage (all activities are described on the display of the balance)
- reliability (all calculation is automatically performed by the balance's software)
- fast data processing (result is obtained after determination of sample mass in water or plunger mass in liquid)
- accurate data processing (before every measurement of mass, display indication is automatically zeroed, this proves the density determination result to be reliable and real).

Selection of the appropriate test weight for your balance

A balance can never be more accurate than the test weight used to adjust it, it depends on its tolerance.

Accuracy of the test weight: Should correspond to the readout d of the balance, rather than something better.

Nominal weight value: This is shown in adjust mode "CAL" in the balance display. Given the choice, the heaviest weight is the most suitable for accurate measurement.

OIML Directive

The key points from the OIML Directive

OIML (Organization International de Metrologies Legal) has established the exact metrological requirements for weights in verified applications in approx. 100 states all over the world. The OIML recommendation R111 (2004 Edition) for weights relates to sizes 1mg-50 kg. Statements are made on the accuracy, materials, geometric shape, marking & storage of the weights.

Error limits for weights of classes E1 to M3

The error limit classes are in fixed hierarchical levels in the proportion of 1:3, where E1 is the most accurate and M3 is the least accurate weight class. When testing weights with other weights, the correct test class is the next highest class.

Error limit classes (= tolerances)

The values given in the table below (tolerances \pm ... mg) are the respective permitted fabrication tolerances. They are to be equal to the measuring uncertainty of the weight, if no DKD calibration certificate is available.

- 1-beaker base
- 2-pans suspension
- 3-plunger
- 4-beaker
- 5-thermometer holder
- 6-thermometr

- 7-plunger string
- 8-hook
- 9-upper pan of the set for density determination of solids
- 10-pan string
- 11-lower pan of the set for density determination of solids
- 12-additional weight
- 13-additional stand for set of pans or plunger.

TEPS-V6

**TEPS-V6, Portable clip-on digital immersion circulator**

MRC immersion heaters and water baths with a precise temperature controlled environment, to produce consistently perfect results. Ideal for sous vide and other demanding applications.

MRC immersion circulator is a space saving clip on heater/stirrer unit. It can be easily fitted to a standard stainless or polycarbonate gastronorm square tank or round (minimum depth 18cms) and maximum volume of approximately 60 Liters.

For large tanks and pots there are several immersion heaters with higher wattage and immersion lengths. Precise temperature achieved by PID high precision controller, accuracy and repeatability are guaranteed. Actual temperature is clearly displayed to 0.1°C. Temperature settings are retained in memory even after 'power off'.

Temperatures can be easily and rapidly set with the push button, wipe clean control panel. Easy clamping method, safety protection for low water level and optional sturdy handle for easy carrying.

The case is constructed from high quality stainless steel.

If the water drops below the recommended minimum level or the unit is inadvertently switched.

Applications:

- Laboratory water baths
- Calibration baths
- Sous vide.

MRC Beads:

MRC beads by design, provide a concurrent thermal and antimicrobial activity that efficiently shields the lab and personnel from invading organisms while thermally heating and cooling like water in any standard water bath or heat block.

- Compatible with standard constant temperature water baths; Tub with 4–8 inches depth is best
- Accepts and supports any size and shape vessel
- Compatible with a broad temperature range from -80°C to 180°C
- Cleans with mild soap, water and 70% ethanol solution.

MRC Bead Baths:

The Bead Bath's eco-friendly, state-of-the-art design takes full advantage of the robust properties of MRC Beads. It delivers exceptional temperature uniformity and gets up and running faster. So you can do things with this bath that you can't do with your old water bath. You aren't limited to water tight containers, so you can safely incubate multi-well plates, petri dishes, and open-top samples at any angle.

- Thermal Uniformity: At $37^{\circ}\text{C} \pm 1.0^{\circ}\text{C}$
- Temperature Range: 5°C above ambient to 80°C .

M720–20L/M720, Bead Bath with Beads: Our Digital Baths are durable, dependable and are available with a variety of safety and convenience.

M700–Series, Bead, waterless Baths

Save Time & Money: Using Beads makes lab experiments easy. No more hassles with emptying, cleaning, and refilling water baths. The bath always stays on, so you don't have to plan around warm-up times. Use Beads in ice buckets and save trips to the ice machine. And no more floating samples.

Stays Clean: Unlike water baths and ice machines that promote harmful microbial growth, Beads keep things dry and unfriendly to microbes. So there is less to clean and less to worry about. The result is more successful experiments and less laboratory downtime.

Stay Organized: Beads hold things in place without accessories. So no more accidents from float away vessels. In fact, Beads aren't limited to capped, watertight vessels. Imagine using petri dishes and 96-well plates right in a Bead Bath. No water. No problem.

Eco-friendly: Beads can transform a water bath into a greener instrument. Beads don't require the use of harmful germicides to keep clean, they use less electricity because the Beads don't evaporate, and the Beads are completely recyclable.

Walk about Tray: It's a quarter the size of a traditional lab bucket. This makes it easy to use under the hood or in tight bench top spaces. With its superior insulating properties, it keeps your samples and reagents at temperature after removing them from the Bead Bath, Chill Bucket, or the refrigerator.

Chill Bucket: The Chill Bucket is a revolutionary laboratory ice bucket that works without ice. It chills while keeping everything dry and in place, so you no longer have to worry about watery meltdowns or losing track of your samples. It substitutes for an ice bucket and maintains temperatures of -20°C to 8°C for up to 8 hours.

Bead Block: Bead Blocks replace common solid, drilled-out aluminum blocks in dry bath instruments. They eliminate the need for using multiple different size blocks to fit different sample vessels. Two sizes available in five colors. Temperature range from -80°C to 200°C (beads & blocks).

DryTemp: The DryTemp is no ordinary dry bath. It's not designed around a solid block, but around MRC Beads for better flexibility and performance. Multitasking is smoother, experiments get done faster, and everything just works better. The temperature range is 5°C above ambient to 150°C .

Features:

- Microprocessor control
- Over temperature protection
- Stainless body and lid.

STO-4

Blend and homogenize within sealed processing bags—eliminating cross-contamination and cleaning between samples

- Small footprint offers convenient placement on your lab bench
- Increase productivity—no need to clean equipment between processing, simply discard bags after use
- Paddle design processes materials that cannot be handled by conventional lab blenders.

The unique action of the Stomacher uses paddles to homogenize samples through a combination of crushing and stirring forces.

It can fit into safety cabinets to reduce your exposure to hazardous materials.

During operation, the curved paddles and an island baffle mold the bag contents into a tubular ring for vigorous stirring and circulation of the sample from top to bottom, extracting more organisms into suspension than any other blending process.

STO-4, Stomacher Blender

STO-4 stomacher is specifically used for microbial extraction. Updated with LCD display which shows running state like speed, time, program.

Support 5 type running program, each one can be settled by user.

This stomacher microbial extraction process has been found useful with a wide variety of samples, particularly: solid and semi-solid products, fresh and processed meat, dry fruits, cereals, grains, seeds, cheese, cosmetics, pharmaceutical products, and specimen tissues.

The safety Bunsen burner Flame 100 activates immediately with the push of a button. No match or a pilot flame are required. Optionally, the Flame 100 can also be operated by a foot pedal* or an external infrared motion sensor*. The Flame 100 is suitable for stationary natural gas and propane/butane gas supplies as well as gas cartridges or gas cylinders. Numerous adapter systems are optionally available.

Reliable safety

The proven Safety Control System (SCS) is also incorporated in the Flame 100. All potential hazards are constantly monitored and, if necessary, protective measures – such as the shutting off the gas supply – are activated. In addition to the ignition and flame control function and the overheating protection the safety package also features the continuous burner head control BHC. BHC unfailingly identifies burner head clogging by liquids or solid substances. Compared with a conventional Bunsen burner, the Flame 100 with the safety standard „SCS“ eliminates the risk of a gas leak or an explosion.

Efficient

The Flame 100 is economical to operate and attractively priced for any laboratory, thus making savings for both your budget and the environment. Compared with traditional Bunsen burners, the gas consumption is reduced to a minimum, because the flame burns only when it is really needed. Compact and rugged. The housing and burner tube are made of stainless steel. The removable burner tube makes cleaning easy and the small footprint is an advantage for any lab bench.

Flame 100 – for a safe flame in the laboratory!

FUEGO SCS BASIC
Fuego-SCS-Basic: More than standard

The Fuego SCS basic can be safely operated by means of the supplied foot pedal or the button function. Different programs are available: a flexible start-stop function or the conventional foot pedal control for short-time applications. In addition, the flame can be started and stopped by briefly pressing on the function knob.

Fuego-SCS-BasicRF: Wireless operation

Wireless and safe flame sterilization! The "RF" model allows operation via radio foot pedal without a disturbing cable. Other than that, the Fuego SCS basic RF has the same functions and safety systems as the standard model Fuego SCS basic. The radio foot pedal is included in the range of delivery.

Fuego-SCS-Digital: Versatile The Fuego SCS can be operated with the touch-free IR-Sensor, button function or foot pedal (optional). For all options, different programs exist that have been developed on the basis of practical experience: flexible start-stop functions, continuous application for up to 2 hours or programs for short flame sterilization - exact to the second.

FUEGO SCS BASIC-RF
FUEGO SCS-Series, provides maximum safety and highest convenience for all flame-related applications in the laboratory.

Simply safe to operate Depending on the model, the Fuego SCS Series can be operated with wireless IR-Sensor, button function or foot pedal.

Universal The Fuego SCS Series can be operated with stationary natural gas and propane / butane gas supplies, cartridge gas or gas cylinders.

Top-off-the-Line safety The Safety Control System SCS © means state-of-the-art safety technology which constantly analyzes potential hazards and, if necessary, initiates safety measures, such as an interruption of the gas supply. In addition to the ignition and flame control functions and the overheating protection, the new safety package also features continuous burner head control (BHC). BHC unfailingly detects burner head clogging by liquids or solid substances and ensures the correct assembly of the burner head.

Exceptional passive safety features: A residual heat display protects against burns. The automatic unit cut-off function prevents unintentional ignition of the flame when the burner has not been ignited for a longer period.

Environment-conscious Excellent energy efficiency in accordance with the most recent standards reduces gas and power consumption. This increases the burning time when gas cartridges are used.

Robust Fabricated entirely of stainless steel - from the controls to the gas connection - and with displays which are protected by heat resistant glass, the Fuego SCS Series withstands even extreme laboratory conditions.

More convenience The animated and high-contrast graphic display can be easily read under all lighting conditions due to the blue background illumination. The self-explanatory, language-less symbol menu facilitates a rapid selection of all functions. The display is not in your line of sight? Acoustic signals additionally aid the user.

Innovative – The DoubleClick IR-Sensor When activated, this additional safety function ensures that the burner can only be ignited by activating the DoubleClick IR-Sensor twice. The detection range and the time interval of the DoubleClick can be individually adjusted. As a result, unintentional ignition or ignition due to dropping or falling objects is virtually impossible, this increases safety considerably.

Precisely adjusted With the new temp. regulation system and an optional temperature sensor, the laboratory gas burner becomes a temperature-control station.

Pressureless The zero-pressure shut-down provides additional safety at the end of work. With it the residual pressure is released from the connection hose and the gas hose's service life is increased.

Gas exhausted? No new cartridge at hand? The new gas consumption display reminds you to have a fresh gas cartridge on hand in a timely manner.

Flexible and individual The Fuego has to 2 user accounts & saves all safety settings, burning times and other parameters for individual & flexible use.

Cooled down The precisely adjustable, exact to the second, cooling time reminder aids you in exactly complying with the required cooling period for inoculation loops.

Properly connected! Graphic installation and operating instructions at the first switch-on facilitate the initial start-up.

24 Places Hematocrit Centrifuges

Each capillary is secured within its own chamber and supported by a holding tray. This holding tray serves to contain glass shards and any leakage should a tube break. It is easy to clean and disposable in the case of glass breakage. The main area of application for hematocrit centrifuges is the determination of volume fraction of erythrocytes in blood. For this purpose, blood in hematocrit capillaries is centrifuged until maximum packed cell volume has been reached. Following centrifugation, the hematocrit value can be read using a special evaluation disc. Preparing blood for photometric determination of bilirubin content in plasma and centrifuging special capillaries for quantitative Buffy Coat Analysis are further areas of application for this special-purpose centrifuge.

MDS-6600

MDS-6600/8600 Microwave Digestion System

Advantages of microwave sample preparation:

- The activation characteristic of microwave enables easier sample dissolution and chemical reaction. Combined with sealed container to increase pressure and temperature, it greatly increases the speed of chemical reaction and shortens the sample preparation time to 1/10 of traditional method.
- Volatile elements or components will not be lost in the process of sample preparation. Low reagent consumption, reducing blank value and waste liquid pollution to the environment.
- Lessening harm of acid mist to human bodies.
- Eliminating contamination of environment to the sample.
- Less interference factors, easier sample control and automation.

Instrument features: (MDS-6600/8600)

- Large screen LCD displays pressure curve and parameters in real time, enabling clear understanding of the reaction status. Reaction results stored with chemical reaction characters, & can be recalled at any time.
- 10 sets of pre-stored digestion method satisfy routine sample digestion needs. Each set of method includes 5-step program (microwave power, total time, pressure value and pressure keeping time) to control the reaction, keeping uniform conditions for different batches of sample.
- The pressure control vessel and other sample vessels are under the same conditions, realizing true real time monitoring & over-pressure protection. Setting target pressure of each step at an increment of 0.1 for more accurate control. 10 double-cup vessels can be used at the same time for high efficiency of sample preparation.
- One second time-base design realizes fast and smooth microwave sample preparation.
- The cavity wall is coated with corrosion-resistant material, preventing acid & alkali corrosion. The system is designed with microwave leakage prevention.
- New-type rotating microwave provides even heating and easy control.
- Specially designed exhaust fan can get rid of acid mist easily.
- Adopting the newest technology of ideal gas pressure control system, real time pressure monitoring device and over-pressure protection, realizes easy and safe operation.

Instrument Features: (MDS-8600)

- The first microwave instrument with monitoring and alarm system for organic volatile reagent. When the concentration of organic gas reaches the alarm line, the alarm sounds and the system stops running.
- Adopting advanced optic fiber temperature measurement technique for more safety.
- New-type rotating microwave provides even heating and easy control.
- Specially designed exhaust fan can get rid of acid mist easily.

COAL ANALYZERS Carbon, Hydrogen, Nitrogen

ELAn-35, Carbon Hydrogen & Nitrogen Analyzer

No disassemble or cooling required, easy to replace the combustion crucible.

For the elemental analyzers, the combustion residues will remain in the combustion crucible, after some quantity of tests (about 100), it needs to be replaced. For other brands, it is complex and time wasting, operators need to wait for the furnace cooling down and disassemble the analyzer, then replace the crucible manually. For us operators only need to click on the software, the crucible to be replaced will be presented from the combustion furnace to the crucible replacing door automatically. Once the crucible is replaced, tests can be conducted immediately.

Convenient to replace the reagent furnace

Separate design of combustion furnace and reagent furnace makes the replacement of the reagent easy and convenient.

Ultra-low drift infrared cell and thermal conductivity cell

With high-performance infrared light supply and superior optical glass, precise thermostatic control as well as pure gold infrared path, the drift of the infrared cell and TC cell have been optimized which are developed and designed by US.

Low operation cost

Purity of 99.15% oxygen and nitrogen can meet the test requirement.

During the test, He consumption is only 0.7L/min.

High automation

Up to 34 samples can be loaded and after that, operators can be freed for other tasks. The analyzer will finish the whole test automatically.

Improved test precision

Samples are carried into the combustion furnace by oxygen blow, which can make sure all the gases obtained by combustion are collected into the gas chamber to improve the test precision.

Shorten preheating time

Preheating time is less than 2.5 hours.

Cooling and the freezing of biological products is a complex process during which many chemical and physiological changes can occur. Biological products can be preserved in many ways, but the storage at very low temperatures is the only method of conservation that minimizes these changes.

Living cells have a critical temperature of -130° , beyond this threshold temperature the stability of the sample can't be guaranteed.

In order to guarantee stability of the sample living cells must be stored under temperatures provided by using liquid nitrogen (-196°C) and we then have a safety margin of $+60^{\circ}\text{C}$ from the critical point.

DBG-001/DBG-002, Sample Concentration

The instrument consists of a base and stand assembly, sample holder and gas distribution system. Test tubes are held in a block. The gas at 5 to 10 psig passes through the distribution manifold. Depending on the test-tube size and solvent volume they can be individually raised or lowered to the correct height. Needles or glass Pipettes blow gas onto the surface of the solution resulting in rapid evaporation of the solvent.

Features:

- High precision and wide range of temperature control.
- Blowing a large number of samples at 1 time.
- Blowing each sample independently.
- Amount of airflow can be adjusted.
- Easy operation; safe and reliable to use.

Chemical digestion of the samples is a prerequisite such as: tests, determination of COD, TOC, total phosphate, nitrogen etc.

The required temperature & reaction time are programmed using the membrane keypad on the front of the reactor. When digestion is complete, the reactor automatically switches off & sounds an alarm. DBR-001 COD reactor is designed to meet USEPA 410.4 method. It can be used to digest closed I micro reflux COD vial and other samples which diameter is 16mm.

Further, it is safer and easier than traditional open macro reflex method. Unique COD program let DBR-001 to be a truly automatic reactor.

When the reactor is powered on, just click the start/stop button, then it starts to heat to 150°C and keep for 2 hours then stop heating with an audio alarm.

Samples are ready to be measured by colorimeter when they cool down. DBR-001 COD reactor is compatible with any COD detectors which use 16mm COD vials. In addition to COD program, DBR-001 is a microprocessor controlled block heater, with temperature range from 60°C to 200°C and timer from 0 to 999 minutes or continuous operation, and 3 extra self-made heating programs can be stored.

For The Digestion Of:

- COD (150°C)
- TOC (120°C)
- Total chromium (100°C)
- Total nitrogen (100°C)
- Total phosphate (100°C)

Features:

- Approved by ERA (method 410.4) of USA and most of the countries in the world.
- Safer and easier than traditional open reflex method.
- Save lab top space, power and water consumption.

DRY CABINETS Pyrex Desiccators, Wood, Drawers

12-305x-Series, Vacuum Pyrex Desiccator

THE MRC desiccator is a laboratory vessel with a ground lid, which is suitable for use under vacuum. It is used for the storage of substances that are sensitive to moisture and for drying moist products. The lower part is divided by a sieve plate and serves as a receptacle for water-absorbent substances such as anhydrous calcium chloride. These drying agents draw out the moisture from the substance to be dried. Drying agents should not be placed directly in the desiccator. Rather, an appropriately sized crystallizing dish should be filled with the drying agent and place it inside.

Place the substance to be dried on the sieve plate and close the desiccator tightly. All MRC desiccators are suitable for use under vacuum.

- With ground stopcocks
- With porcelain plate
- Highly transparent PC (Polycarbonate) that is strong, allows for clear sample viewing, is non-corrosive, is easy to clean & maintain
- The basic component of the drying agent tray with descant allows the round desiccators to be used in various experiments under non vacuum conditions
- Convenient 3-Way stopcock provide easy vacuum release during operating
- Lock holds the bottom and top lid together under non vacuum conditions.

Test hole

One test hole with the diameter of 45mm made with special mould is arranged on the left and right of the incubator respectively for observation. Internal silica gel soft plugs are provided to make sure the temperature and humidity

inside the incubator are not affected during the test.

Easy for maintenance

It is easy to maintain and clean condenser to improve the refrigerating performance and save energy.

RS232 interface

It is a special interface for PC. One software CD (WINDOWS2000 or simplified Chinese WINDOWS XP operating system) is attached. Test program is written, monitored & saved with special PC software. Test data is

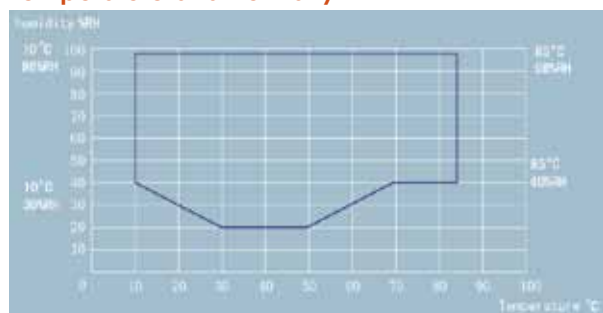

directly displayed and printed with special PC software.

Ponded water inside inner bag can be discharged easily

The inner bag applies side, high, middle and low structures to discharge water easily and keep the incubator clean.

Temperature and humidity

Features:

- The incubator is made with imported NC machine tool and laser processing technology. The outside incubator body applies high quality cold rolling plate, which is strongly resistant to rusting. The inner bag applies SUS304 stainless plate
- The incubator bottom truckle is imported from Japan. Its direction is adjustable and it can be locked. The outside incubator body is sprayed with American Dupont powder.
- One test hole with the diameter of 45mm made with special mould is arranged on the left and right of the incubator respectively for observation. Two silica gel soft plugs are provided inside.
- Temperature and humidity
- The heat insulating material of incubator applies Germany Bayer freon-free polyurethane one-time foaming technology to improve the insulating property and reduce energy consumption. It can save over 30% energy in comparison with similar products. The overall strength of incubator is good.

GCC30

Options:

- Over-temperature protection to DIN 12-880 class 2 (recommended to protect valuable contents & for unattended operation)
- 300°C optional maximum temperature
- Optional liquid nitrogen injection system to reach -150°C (including 2m insulated stainless steel pipe & pressure relief valves)
- Access ports for cables & pipes
- Programmable controls with additional segments & multi-program capability
- Interior light (subject to temperature limitations) or through window illumination kit
- Additional shelves as required
- A wide range of sample loading & handling accessories can also be supplied
- Paperless DAQ (Data Acquisition) graphical recorders available.

Access Ports: A nominal 50mm diameter cable port is located centrally on the left hand side of the inner chamber wall.

Air Circulation: Forced air circulation is provided by a rear mounted fan. The fan is mounted behind an air guide to prevent it being touched by the operator.

Shelves and Runners: The chamber is supplied with three pairs of fixed shelf runners. Two perforated stainless steel shelves are supplied.

Temperature Control: The temperature of the chamber is controlled by a Eurotherm 3216 digital indicating microprocessor based three term time/temperature program controller. The controller is fully adjustable and may be "tuned" by the customer to suit the temperature and load in the chamber.

Under/Over Temperature Control: A Eurotherm 2132 controller is fitted as a low and high temperature cut out. If a fault causes the main set point temperature to be exceeded then a safety contactor will isolate the heating elements and solenoid valves. The over temperature circuit must be manually reset when the chamber has warmed up or cooled down and the fault has been cleared.

Heating System: The chamber is heated by mineral insulated metal sheathed elements. The low surface watt loading of the elements ensures a long and reliable service life.

Cooling System: The chamber is cooled by liquid Nitrogen. A cool channel circuit in the controller switches a solenoid valve to control the direct injection of liquid into the chamber. A second solenoid valve in the supply line is controlled by the under temperature controller and will switch off the liquid Nitrogen if the direct injection valve fails in an open condition. Appropriate pressure relief valves are included to ensure a safe working system. A two metre length of insulated flexible stainless steel hose is supplied for connection of the equipment to the customers bulk supply.

Build Standards: The oven is designed and built to good engineering practice in a facility having a certificated quality assurance scheme to ISO 9001:2008. It complies fully with the relevant UK and European Union Health and Safety at Work legislation. It is compliant with the EU Low Voltage and EMC directives and carries the CE mark.

GCC-Series, Gas Cooled Chambers

Direct injection liquefied gas cooling using liquid CO₂ to achieve -60°C (or optionally using liquid nitrogen to achieve -150°C) & rapid heating to 200°C as standard (or optionally 300°C) all under the control of a sophisticated 8 segment pair controller. Enables the most rigorous temperature test profiles to be used for accelerated age testing or environmental simulation.

Thermal Range: The working temperature range of the chamber is -75°C to +400°C.

Thermal Performance: The equipment has sufficient power to enable a heating rate of up to 10°C/minute with a small thermal load. Temperature stability under steady state conditions is better than ±0.5°C.

Temperature uniformity throughout the empty chamber measured not less than 75mm from any surface is better than ±0.5°C.

Internal Chamber Construction: The internal chamber is fabricated from 304 grade polished stainless steel. All the joints are externally sealed to prevent moisture entering the insulation when the chamber is used at temperatures below ambient.

External Construction: The main case of the chamber is fabricated from mild steel rectangular hollow section panelled with zinc coated mild steel sheet. All external surfaces are finished with grey powder paint.

Thermal Insulation: The inner chamber is insulated with high quality ceramic fibre and mineral wool blanket of adequate thickness to ensure a safe outer case temp.

Chamber Door: The chamber is fitted with a single door that is hinged on the left hand side and opens to give full access to the chamber. The door is fabricated from zinc coated mild steel sheet for the exterior and 304 grade stainless steel for the interior. The door is fitted with silicone rubber door seals to reduce heat leakage through the joints.

PAK6

Model	PAK6
Applicable Sample	ds DNA, ss RNA, Protein
Electro-rod & Electro-Ring	Platinum
Dimensions (mm)	W290xD135xH150
Weight	1.8kg

- It is possible to purify samples within an hour. You can apply agarose and polyacrylamide gel slices including nucleic acid or protein on the EXELUTOR Pak6 and apply at 25–35V for 2–5min. In case of incomplete elution, a second attempt can be made by replacing the buffers. The Elution time is flexible according to the kinds and sizes of samples and in case of linear DNA, 4min is sufficient for the size up to 10kb. Eluted DNA can be extracted with phenol! chloroform once and then ethanol-precipitated according to the routine methods. High yield of more than 90%.
- Since disposable parafilm is used for the sample plate, you don't have to worry about contamination.
- 0.2–0.5ml of buffer is sufficient for elution.
- There is nearly no trouble.
- It is easy to handle.

Accessories:

PT-Ring

PT-Rod

PAK6, Exelutor, Capacity–6 samples

- Economical & quickest equipment with the best yield
- 95% elution within 4 minutes. (DNA, RNA, PROTEIN)
- Sturdy, small and easy to handle
- 6 different samples can be applied simultaneously
- 0.2–0.5ml of buffer is sufficient for elution.

How to Use:

1. Lift up the top plate and fix it up by the stopping knob.

8. Control the voltage in the between 20V–40V on power supply. If the voltage over 50V. The lamp and electrode could be defected.

2. Place the disposable parafilm under the electronic ring.

9. Turn on the switch.

3. Place a gel slice on the center of the electronic ring.

10. Come out small bubbles from gel slice.

4. Lift the top plate down.

11. Using UV lamp. The DNA coming out from gel slice could be seen.

5. The Electrode should be touched on the gel slice.

12. After 2–4min. Turn out the switch.

6. Pull the buffer out inside the electronic ring enough to cover the gel slice.

13. Lift the top plate.

7. Confirm the switch and the lamp off.

14. Absorbing the buffer by a Pipette.

F FUME HOOD Biological

BSC-C1-1, BSC-C1-2, BSC-C1-3, BSC-C1-5, Class I

The Class I Biosafety cabinet is designed to provide personnel and environmental protection.

- Class I Biosafety Cabinet does not protect the product from contamination because un-purified room air constantly enters into work area.
- As a partial containment unit, the Class I Biosafety Cabinet is suitable for work in low to moderate risk agents (Biosafety Levels 1,2 and 3) where there is a need for control but not for product protection.
- Unlike conventional fume hood, the HEPA filter in the Class I Biosafety Cabinet protects the environment by filtering air before it is exhausted.
- With the negative pressure, personnel protection is made possible by constant move of air into the work area.

Features:

- Soft touch control panel, LCD display.
- UV lamp for sterilization.
- Stable air flow system.
- provide firm protection to personnel & environment.
- Energy-saving, high efficiency, low noise.
- One piece 304 stainless steel work table, easy for cleaning.

BSC-CY-4, Class II Biosafety Cabinet

The MRC Cytotoxic Safety Cabinet is the premium solution for cytotoxic/antineoplastic drug processing, providing the highest level of patient, pharmacist and environmental protection. This revolutionary product builds on MRC's experience of more than 10 years as an expert in biosafety containment technology.

The unique demands of handling and preparing cytotoxic drugs for use in chemotherapy require a specialized cabinet. As cytotoxic drugs cannot be inactivated by chemical decontamination, Class II biosafety cabinets should not be used. With this in mind MRC has developed a highly specialized range of cabinets designed especially for handling these potentially dangerous drugs

BSC15IIIX, BSC11IIIX, Class III

Class III Biosafety Cabinet is totally enclosed and gas-tight with ULPA filtered supply and exhaust air. Work is performed with long-sleeved gloves. The cabinet is kept under negative pressure of at least 120 Pa, and airflow is maintained by a dedicated exterior exhaust system. It can protect the operator, product and environment. It is designed for work with level 4 pathogens and provide an alternative to the positive-pressure suit made for maximum containment laboratories.

- Exhaust air is double-filtered through high-quality ULPA filters with typical efficiency of 99.999% for 0.12um particles, better than HEPA filters.
- An angled cabinet front ensures an ergonomic working posture.
- Cabinet operates at negative pressure relative to the laboratory in order to prevent migration of pathogenic materials out of the work area.
- It effectively sterilizes work area with UV installed inside.
- Different sizes upon request.

Unique Chamber Dimensions for dental laboratory

MRC burnout furnaces are designed for maximum efficiency and provide a generous internal capacity despite modest overall size. Although the volume of the muffle is relatively small. This furnace enables to cast in one burnout.

MSF 11/4: Accept 4 rings x 9 - 4 rings x 2

MSF 12/6: Accept 12 rings x 9 double layer.

This advantage is very important, as it enables to gain maximum use of muffles volume.

MSF 11/8

Power Supplies for Silicon Carbide Furnaces:

The characteristics of the control systems that are used with silicon carbide elements result in maximum power supply requirements that are not as intuitively derived as those for furnaces using other heating technologies. For this reason a more detailed description of the maximum power supply that is required per phase has been included in the specification table.

Power Supplies for Silicon Carbide Furnaces

The characteristics of the control systems that are used with silicon carbide elements result in maximum power supply requirements that are not as intuitively derived as those for furnaces using other heating technologies. For this reason a more detailed description of the maximum power supply that is required per phase has been included in the specification table.

Bactrox, Hypoxia Chamber

This latest addition to the MRC Bactron line offers precise oxygen control ranging from 1% to 20% for microaerophilic bacteriology and hypoxic tissue or cell culture applications. It has the additional capability of controlling carbon dioxide from 1% to 20%. The MRC Bactrox permits oxygen and carbon dioxide control in increments of 0.001%.

Unlike a tri-gas incubator, the Bactrox allows for microaerophilic bacteriology and hypoxic tissue or cell culture work to be performed in desired oxygen conditions throughout all culturing processes. The Bactrox is a complete workstation so bacteria and cells are more likely to grow faster and show less damage.

Features:

- Ultra Bright LED Examination Lights
- Stainless Steel Construction for Long Term Durability
- Independent Gas Controls
- RS232 Data Collection
- Condensation Control – High Humidity With Little or No Condensate
- Immediate Access to Chamber Via Sleeves
- Standard Microscope Adapter Accessories
- PC Calibration of Oxygen Sensor
- 24 Month Limited Warranty.

Bactron X, MRC Anaerobic Chamber

The Bactron X is designed to provide 17 cu.ft. of workspace and gloveless dexterity in closed environment industrial, research and development, quality control and packaging applications. Atmospheres of nitrogen, CO₂, or any other inert gas are possible.

Bactron systems have airtight construction of stainless steel and rigid Plexiglas for unobstructed vision and integrity. The patented cuffs form a comfortable seal around the operator's arms permitting bare hand manipulation of plates and specimens inside the working chamber, making work more comfortable and efficient.

Chamber atmosphere circulates through a condensate controller then through a catalyst, which removes any trace amounts of oxygen. High relative humidity is maintained while condensate moisture is removed without the unnecessary desiccants, which can dehydrate media and samples. Each unit contains an integral vacuum pump to provide rapid evacuation of air from the air lock module for replacement by an inert gas mixture.

Unlike many anaerobic chamber manufacturers, the MRC Bactron chambers have full third party verified safety compliance certificates. We meet EN61010, UL61010 and Can/CSA61010 standards.

Installation is included with purchase. In addition, every purchase of a Bactron system in the USA includes an operator training workshop in anaerobic bacteriology and use of the system.

The Homogenizer is widely used in fields of Biotechnology, Human & veterinary medicine/clinical medicine, Pharmaceutical industry, Cosmetics industry, Food industry, Petrochemistry, Paint & lacquer industry etc. The material is repeatedly cycled through narrow slits in the stator where it is rapidly sheared and disintegrated by high shear mechanical action. Complete homogenization of tissues (muscle, liver, breast tissue, etc.) is usually achieved in a few seconds. Little, if any, heat is produced during the process.

HOG-160-1/2

Features:

- Easy to hold & light weight for one hand operation.
- Sample Volume Range: 0.1–50 ml or 1–250ml
- Autoclavable stainless steel shafts. Inert to aggressive solutions.

HOG-24

Typical Samples:

- Human, animal, plant cells
- Micro-organisms
- Soil and sediments
- Swabs and feces
- Drugs, polymers, lotions, etc.

Sample Preparations:

As heat generated by grinding process will make part of sample tissue damaged, we recommend:

- After putting the sample into the sample tube, please preserve the sample for 6~12 hours at low temperature (below -60°C degree)
- Then take out for grinding to make the effects achieve the best.

Overview of the HOG-24 Procedure:

- Prepare lysis tube

- Process about 30 seconds

- Centrifuge to pellet debris about 1 minute

- Transfer cleared lysate

HOP-2820-TIT

Temp. controller TR 28-3T

This microprocessor controlled temperature regulator is suitable for the high temperature hot plate. After adjustment of the temperature setpoint by the membrane keypad, the PID controller keeps it constant (control deviation 2 K or less).

Programmer PR 5-3T

The microprocessor controlled ramp regulator offers a comprehensive time/temperature regulation for the high temp. hot plate. Pressing the START key activates a program of up to 5 ramps. Max. 5 ramps (consisting of ramp time, constant temp. and time of constant temp.) can be programmed. 3 program sets can be loaded into the non-volatile memory. A programmed lead time enables the activation of the start up to 99 hours in advance.

Every temperature and time parameter can be selected with its own key. Consequently the setting is easy and clear. It is possible to pass over single ramps by setting the according parameter to '0'. Every set value can be controlled during a program.

Back-up by an EEPROM. The device is equipped with a change-over switch to continuous control; buzzer signal at the program.

High temperature hot plate of Titanium up to 600°C
HOP-2820-TIT.

This high temperature hot plate reaches its max. temp. of 600°C within about 20 min. The upper plate consists of TITANIUM, overall dim. 280 x 200 mm. The marked area of constant temperature is 230 x 160 mm. Owing to a special insulation the device can be placed even on surfaces sensitive to heat. Metal sheets all around keep the casing temperature to a minimum.

The insulated snap-lid ensures little loss of heat and short times of warming. Between the closed lid (inner surface Ceran®) and the heating plate remain 26 mm, enabling an intensive heating of plain parts at high precise temperatures. The whole casing is made of stainless steel. The temperature regulator is connected by two plugged cables.

HOP-2820-TIT is available either with a temperature controller or with a programmer. The temperature controller keeps the device constant to an adjusted temperature within the whole range.

The programmer allows the control of certain programs including phases of heating up, constant temperature and cooling.

Equipment of PR5-3T and TR 28-3T

2-poled main switch; individual adjustment of proportional range, derivative/integrating factor and cycle time; control range limitation (to avoid the setting of values not useful or harmful to an application); contact maker input, actual value correction, junction bush for high temperature hot plate, wattage power control 1...100%, uninterrupted switching. Both regulators show the actual value constantly. Furthermore the programmer shows the remaining time of a ramp. When the SET key is pressed, the display changes to show the setpoint. On request the devices are available with a temperature limiter to avoid superheating.

Details and structure of PHP-4429

The hot plate is constructed of solid, low-distortion GG15 casting. Cold housing, also in continuous operation. Material No. 1.4301, from rustproof high grade steel. Centre section is additionally sprayed in orange. Four adjustable feet for extra stability. Study construction, 150 kg max. hot plate load. Ready for connection with 1.5 m. cable.

PHP-4429 / PHP-4429/2P, Digital Precision Hotplate up to 450°C**Temperature Range: 20 - 450°C**

PHP-4429 is a hot plate with automatic control for precise temperatures from 20 to 450°C. The required temperature is preset on the digital regulator and remains automatically constant. The actual temperature is continuously displayed with 13mm high numbers. The long-lasting electrical heating unit can be used in three heating stages - 825 - 1650 - 3300 Watt. Each stage can be finely tuned from 10 to 100% by an electronic output control to prevent overheating and any after-heating due to excessive power. The heating stages 825 and 3300 Watt, heat the total area of the plate. The special 1650 Watt stage heats only the right-hand section of the plate. Due to creeping heat, the temperature drops off from the right-hand section to the left-hand plate edge, by approx. 40% (temperature decline).

A low voltage 3-pole socket mounted on the right-hand side of the housing allows the following extras to be connected (however not conditional):

1. Time switch, for switching the heating unit on and off at preset times.

2. Contact Thermometer

3. Temperature fuse cut-out

As temperature fuses must have heat contact, a 4mm diameter hole has been bored on the edge of the right-hand plate for their insertion. The heating unit is automatically cut off from the mains supply after the fuse blows and the contact has switched to the off position. The fuse has to be renewed once it has blown.

HOP-1717, High power, rapid, glass ceramic hotplate up to 500°C

The glass ceramic used for the heating surface is manufactured by the Schott company and is in use in millions of households. This glass ceramic is highly resistant to breakage and sudden changes of temp. (a temperature shock of over 700°C can be withstood without damage), it is also distortion and pore-free as well as being permeable to ultra-violet light and resistant against chemicals. Construction: The low-density, glass ceramic hot-plate, electrically heated centrally over an area of 145 mm dia., is mounted on a high-grade, stainless steel housing. The variable temperature control system is regulated by an energy regulator 10..100% for temperatures up to 500°C. The energy regulator is housed in a separate, heat resistant container. Thereby ensuring that the regulator is not influenced by excess heat during non-stop operation. A lighted control lamp shows when the hotplate is switched on. The appliance has a integrated temperature sensor to safeguard against overheating. The ready-to-connect hotplate is delivered complete with a 1.8 m mains cable.

PHP-3535F/6116F, Precision Hot Plates for non-stop operation

The heating surfaces of the hot plates are composed of a good heat conducting Aluminium alloy, and have a smooth anodized finish for easy maintenance. The electrical long-term heating ensures that the temperature remains uniform, even on the corners and edges.

The microprocessor controlled digital regulator allows the operating temperature to be preset in 0.1°C stages up to 99.9°C and in 1.0°C stages for temperatures over 100°C. The preset temperature remains programmed, even when the equipment has been switched off.

Presetting is only possible by using two fingers; this is to prevent any unintentional alterations that could occur by

accidentally touching only one key. The actual temperature is permanently displayed by 14mm high numerals after the keys have been released.

An adjustable self-protection against overheating prevents the hotplate and the substance to be heated from being subjected to dangerously high temperatures.

This protective device is activated when the START button has been depressed. A removable Plexiglass cover prevents any unauthorized adjustments.

All models are equipped with an electronic output regulator that allows the heating output to be adjusted between 10 to 100%, this prevents the hotplate exceeding the predetermined temperature and/or to avoid any after-heating effect. The temperature of all precision hotplates is measured with an integrated, quick-reaction sensor (PT 100).

All models are equipped with a 3-pole diode output bushing (extra-low voltage), to permit the connection of one of the following appliances:

1. Contact Thermometer – to measure the temperature directly from the heated material and to regulate.
2. Time switch – in order to heat or cool the apparatus at preset intervals.

Model PHP-6116F (long shape) is equipped with 5 screw-in sockets for support rods, at intervals of 125 mm.

Special Feature:

Due to the asymmetrical, quick-reaction special heating and thermal sensors as well as output adaptation to the thermal requirements, very precise temperatures with a good uniform heat are obtainable over the whole heating surface.

SOD-3636

370°C

SOD-Series, Sand Baths Up To 370°C

Electrical sand baths with variable temperature control, available with or without a thermostatic regulator. Robust construction for continuous performance. Aluminium alloy hotplate. Because of the asymmetrical, long-term heating system (hotplate corners and edges are subjected to more heat) an even temperature is guaranteed over the entire heating surface. The sand baths consist of an aluminium alloy hotplate with a screwed-on, sealed stainless steel frame with a usable height of 50 mm. The sand has direct contact with the hotplate. The housing is constructed from high-grade, stainless steel No. 1.4301, whereby the central section has been additionally sprayed in orange.

4 adjustable feet ensure extra stability. Connecting cable approx. 1.7m long, 230 Volt/3200 Watt with mains plug.

Sand baths: Change in temperature

The data shown depends on the quality & graining of the sand.

Since sand is a poor heat conductor, warming towards the surface of the sand occurs very slowly. These measurements were taken after a 90 minute heating period.

HC6-2

HC6-2, HC9-2, HC30-2, Standard Humidity Cabinets HC9R-2, HC30R-2, Refrigerated Humidity Cabinets

MRC Humidity Test Cabinets provide a controlled environment for a wide range of industrial & biotechnology testing applications. This line is designed to duplicate a natural condition, which allows testing the limitations of a sample when exposed to various temperature & moisture fluctuations.

Microprocessor controls maintain temperature and humidity in approximate ranges of 35–70°C (HC30R-2 10–70°C) and 40–95%RH, respectively. An extra large water jacket minimizes condensation inside the chamber and supports optimum uniformity conditions.

A low-pressure water vapor generator, injecting saturated water vapor into the recirculating air duct, controls chamber humidification. This process is preferable to steam generation because steam introduces additional heat to the chamber atmosphere, which then compromises temperature control. Uniform temperature and humidity are maintained using the same horizontal air flow technology employed in the MRC oven family.

Applications include:

- Shelf Life Testing.
- MIL-SPEC Packaging.
- Component Burn In.
- Vapor Transmission.
- Stability Testing.
- Fingerprint Detection.

MRC Humidity Test Chambers provide a controlled environment for a wide range of industrial and bio technical testing applications. All chambers include:

- Microprocessor Control.
- Seamless Corrosion-Resistant Stainless Steel Interior.
- High Limit Back-Up Controller.

Models HC9R-2/HC30R-2, These humidity test chambers incorporate a refrigeration system that dramatically increases the operational range of the cabinet.

1013-2

1013-2, Hybridization Incubator

Hybridization ovens are the preferred technique for hybridization in today's laboratory. Incubation takes place inside the incubator, under constant rotation, ensuring even distribution of probe solution over the membrane. While there are other solutions available for hybridization applications, hybridization ovens offer better agitation and higher throughput. They also require less volume per membrane area, resulting in savings for labs.

MRC 1013-2 Hybridization incubator's unique fan assisted airflow system circulates air evenly and continuously, delivering excellent temperature uniformity throughout the oven chamber. This system ensures fast recovery of chamber temperature after a door opening.

The digital set/digital read microprocessor temperature controller maximizes rapid heat-up of the oven. An over temperature safety control is automatically set by the microprocessor at 1.0°C above the setpoint. In the unlikely event of a microprocessor failure, a thermal cutoff will shut off the power to the heating elements.

The 2-20 RPM rotation speed range permits hybridization and washing at different speeds at the touch of a dial. A separate jogging switch has been included to allow incremental rotation of the carousel for easy loading & unloading. This unit has a 12 bottle capacity and is supplied with a drip pan with adjustable feet, a locking pin, & a power cord.

3025-2

3015-2, 3025-2, Water Jacket Value Line Incubators

Water Jacket Incubators provide excellent temperature uniformity. Both the water jacket and the heated door design eliminate condensation on the walls & glass door. Copper strip in the water jacket inhibits bacteria growth.

The microprocessor temperature control allows digital temperature set and read-out to 0.1°C. Incubators are available as a single chamber unit or over/under unit and feature a full length inner glass door for visual checks without disturbing incubation. Through-wall access port allows roller apparatus, rocker or stirrer operation. Adjustable leveling feet compensate for uneven surfaces. All 3000 Series Incubators are supplied with a humidity pan.

LIFLY-2

LIFLY-2/LIFLY-VIEW-2, Drosophila Incubators LIFLY Series

The MRC LIFLY is the first Drosophila specific low temperature incubator that takes advantage of the range of temperatures acceptable in Drosophila culture allowing the condensing coil adequate cycling time, thus avoiding ice buildup. The LIFLY addresses all of the major performance issues associated with other fly-specific incubators on the market.

This incubator functions within the range of temperature preferred by fruit flies. The elements only activate if the chamber temperature goes below the programmed lowest acceptable level. The compressor will shut off & rest while the chamber temperature slowly rises in response to a door opening or heat from fan or optional light. This results in a longer lasting unit with less maintenance, reduced heat output & less noise from the compressor.

LIFLY-VIEW-2

Applications:

- Microprocessor controlled interior light mimics diurnal cycles that foster breeding.
- Conformal coated refrigeration coils.
- Robust, programmable heating and cooling control.

Energy Saving Features:

- On and off condenser cycles prevent ice build-up.
- No costly coil replacements from pitting caused by crystallized gas contact with ice.
- Compressor cycling requires less than 25% of the energy required for standard B.O.D. incubators.

MOB-02A/MOB-04A Thermo-shaker incubator is a high performance microplate incubator and orbital shaker which accommodates up to 2/4 microplates. They can be used for any enzyme or cell-based assays requiring uniform and strictly controlled incubation up to 70°C & effective mixing.

Temperature, shaking speed, and incubation time are programmable via the keypad, while the status parameters are displayed on the LCD in real time via an easy to use interface.

Microprocessor controlled heating plates above and below microplates provide uniform temperature with less than 0.5°C variation between any two wells. This ensures our standing and repeatable assay performance.

The devices can be used in:

Cytochemistry – for in situ reactions;
Immunochimistry – for immunofluorescent reactions;
Biochemistry – for enzyme and protein analysis;
Molecular chemistry – for matrix analysis.

Features:

- Temp. range: from +8°C over room temp. to 70°C.

2406-2/2406/2-2, Economy Air Jacketed

Our model 2406-2 was designed and manufactured to accommodate tight budgets, while maintaining the fundamental needs of quality and precision. These units have PID microprocessor controllers, a heated outer door and a tempered-glass inner door. They provide exceptional temperature uniformity, while minimizing cold spots that lead to condensation and ultimately, contamination.

Although they do not have a humidity display, the extremely stable temperature environment maintains constant humidity through evaporation at up to 95%.

The audible/visual alarms for temperature and CO2 respond to out-of-tolerance conditions. They offer an independent over temperature safety control to protect samples from overheating, and an optional CO2 tank switch/alarm to prevent prematurely exhausting the gas supply.

With the changes of China's mineral resources detection and mining work strategy from denotative development in the past to connotative development, the government begins to attach importance on effective investment of mineral exploration, promoting the diversification of investment, and reduces the financial investment while encouraging commercial mineral exploration and development.

The framework of China's commercial mineral resources exploration industry has been formed primarily, and the mining right system has been improved gradually .The market is forming and the commercial mineral exploration activities are beginning, which greatly strengthen the exploration and investigation on

mineral industry. However, to these mineral companies, unlike the national geology exploration bureau, the tools for exploration are not that complete, which restrict the development of these companies if chemical titration method is still used for sample testing, which are with low efficiency and many errors because of human operating.

However, the various analyzers produced by MRC can help the mineral exploration for these companies, improving efficiency, precision, and reducing testing time, which greatly promote the development of mineral exploration.

EDX-POCKET-VII is applied for mineral exploration, in situ testing analysis, & soil content analysis. With the features of small, light, quick analysis, high precision and handheld, it has been widely applied for element sample testing and analysis of various ores and slag. Samples include all natural ores, slag, rocks, soil, slurry from sulfur to uranium, with forms of solid, liquid, and powder.

- Quick category of ore samples.

Auto multi-element qualitative and quantitative analysis. Various ore samples choosing and free adding of infinite samples

- Built-in intensified calibration methods, can calibrate the deviation caused by different geometric states and uneven structure density.
- With GPS function, applied in geological exploration and mineral in-situ testing, it can record the data into GPS. In the wild, it can search the satellite signal at any time, recording the longitude, latitude, altitude, and satellite number when testing, and save these data accompanied with the test report.
- It can quickly test a big range of mining area, effectively detect the land belt mode, and survey and map the distribution of ores and mines, doing help for mining rich mineral area in primary.
- Test raw ore, concentrate, and tails when washing the ores.
- Determination of the raw ores & concentrates when purchasing
- Determination of light elements, such as Mg, Al, Si, P, S etc
- Equipped with HD camera, can directly visual requested detection of mineral vein and mineralized points.

- **Geological soil detect**

Simply trigger the instrument, knowing the trace metal element content.

- **Application of finding ores in the wide**

Can quickly on-spot follow the abnormalities of mineralization and circle the boundary of ore body. According to the low grade industrial requirements, it can simply get the grade conclusion of boundary. It also can scan and analyze the rock core samples.

- **Mine project analysis**

The fourth generational handheld Genius 7000 can circle the core mineral vein in very short time for key mining and can quickly tell the grades of ores, sub prime ores, and non-ores .It also can improve the productive rate of the mine and greatly reduce the expenses of chemical examination & transportation.

Apparatus is used to determine the Heat Deflection Temperature or the Vicat Softening Point. All the specimens are charged with a constant load and immersed in a bath, where temperature is increased at a standard velocity. The attained heat resistance rate of plastic materials is a widely required parameter for product characterization, for quality control, as well as for evaluating their conformity to the previewed applications.

The optional software system enables to produce graphs showing the deformation of each specimen & temperature increase versus time. This tester may be used for tests conforming to the following standards: ISO 75, ISO 306, ASTM 0648, ASTM 0 1525, G81T 1633, G81T 1634. Housing made of steel. Stainless steel inner bath. ARIMAD-3000S, Plant Water Potential Measurement Device for Agricultural use

- Pressure chamber method demonstrating the plant's reaction to moisture excess or deficiency.
- Enables adjustments of irrigation schedule.

ARIMAD keeps you in touch with your crop's water status!

Provides Indication of:

- Prevailing soil moisture stress.
- Influence of environmental changes-heat load, humidity, wind, salinity etc.
- Plant moisture stress.
- Changes in growth, proteins & photosynthesis.

Simple & Short Procedure of 4 Steps:

1. Selecting a representative leaf.
2. Preparing the instrument.
3. Inserting pressured gas in the chamber.
4. Reading the plant's water potential.

Low Tension values (~3bar) – High water potential, sufficient water for plant growth.

High Tension values (~20bar) – Low water potential, adjustments of water supply needed.

Images appear undistorted and natural-looking

Producing images that cause less strain on your eyes was one goal of Novel's ergonomic design. We tackled the problems usually associated with stereoscopic microscopes, namely chromatic aberration and distortion in the lens that cause surface irregularities in the image, and solved both to a high degree. Now you can view stereoscopic images that appear undistorted in all their brilliant, true-to-life colors.

Superior optics coupled with simple operation brings you unsurpassed performance.

GEM-250, Stereo Gemological Microscope

The GEM-250 utilizes the optical performance of MRC's GEM-250 stereo microscope to enhance distinct three-dimensional details with a zoom function. Rugged and precise, the optics of the GEM-250 performs analyses and measurements more accurately & efficiently thus reducing your workload. At a working distance of 113mm, manipulation of the inspected gem or the addition of a further apparatus is permitted without obstruction. Available in a trinocular version for photographic or digital capture of the gem, the GEM-250 provides you with an opportunity for extra revenue. Moreover, when teamed with MRC's RCam 480, the GEM-250 becomes your instrument of instruction for teaching and training by showcasing the gem in real time via a television, a projector, and computer simultaneously.

Holders, Plates, & Analyzers:

1. Wire Stone holder The ideal holder for diamonds, rubies and sapphires. Comprised of stainless steel for a long working life, the wire stone holder permits the maximum amount of observation.

2. Rounded Edge Stone holder Perfect for irregular gems and jewelry. Precision Grafted of stainless steel to provide an adequate grip without corrupting irregular shaped gem samples.

3. Inclusion pointer For rapid location of inclusions and fractures on the surface of gem.

Large gem stags plate

Magnetically attachable & covering the stage area of the GM168 base to provide a large surface for rough stones and large gems (i. e. fade) inspection in conjunction with the incident fluorescent illumination.

Diamond Proportion Analyzer Kit

Complete kit for effective 8, accurate identification 5 measurement of proportions 4 pavilions. Includes the magnetized diamond mount, diamond proportion reticule, & micrometer eyepiece(10x)

Immersion cell

Capable of rapid & easy detection of treated gems characteristics: such as clarity enhancement, HPHT annealing, irradiation, & surface coloration, the immersion cell is especially useful for rubies.

Eyepieces:

- Magnification range: 0.75x-5x
- Zoom Ratio: 1: 6.7
- Observation angle: 35"
- Working distance: 113mm
- Magnification: 10x

Accessories For Microscope Applications

Phase Contrast

Phase contrast provides clear contrast of specimen without dying and therefore useful for observing alive or transparent specimens.

By simply rotating the turret, the condenser can be set for brightfield and phase contrast microscopy. It can be used with 10x, 20x, 40x and 100x phase objectives. Simple plug in phase ring is also available for 10X, 20X and 40X phase objectives.

Polarizing

Polarizing – special polarizing equipment available with polarizer, analyzer and an optional pol specimen stage enable pol microscopy as Geology, Mineralogy etc.

Darkfield

Darkfield central stopenables darkfield observation at 4x through 40x when the attachment is mounted on the brightfield condenser bottom section.

Kohler Illumination

Kohler Illumination which is centerable and can be ordered as option.

B1-220ASC, Biological Microscope

The MRC B1 Biological Microscopes with its standard features are designed for school applications.

This system is for use in laboratories/ clinics, research facilities and medical schools. The modern and ergonomic design distinguish itself from the others. Its affordable price and excellent quality give you the best value for your money.

Head

There are five kinds of head for your choice, which are 360° rotating around its vertical axis. Two binocular heads are available, with standard 45° inclined and optional 30° inclined, providing adequate choices for your best viewing comfort. Also, diopter rings on both tubes are a standard feature to facilitate compensation for eye acuity. Graduated interpupillary distance adjustment is from 54mm to 76mm. Also, there are monocular, dual teaching and trinocular head available for selection.

Mechanical Stage

Built-in ball bearings mechanical stage provides a travel range of 76mm X 50mm in the X and Y direction respectively with graduations reading up to 0.1 mm for accurate positioning of specimen.

Coaxial Coarse and Fine Focusing Knobs

The precision Focusing mechanism is designed for frequent use and also provides a smooth adjustment of focus. The coarse focus is with adjustable tension device.

Condenser

The extremely efficient, removable N.A. 1.25 abbe condenser for brighter illumination level, and an iris diaphragm for resolution and contrast control.

Illuminator

A standard halogen lamp 1 2V/20W with the intensity control system is used, providing an even and bright illumination for all magnifications. Kohler illumination can be ordered as option which is centerable for advanced and special applications.

Work principle:

The sample is grounded to powder by impact and shearing effects. First, the sample is feed to the hopper, then thanks to strong centrifugal force, the sample is thrown against the wedge-shaped rotor, where the sample is crashed. Then the sample goes through the rotor & the fixed ring sieves for final grounding, you can manually stop the machine and collect the sample.

Advantages:

- Wide range of accessories including various collection and feeding systems, rotors and sieves.
- Variable speed setting between 7,000–20,000 rpm.
- Easily exchangeable grinding and sieve parts.
- Final product size can be determined by using ring sieves with aperture sizes from 0.08–8mm.

Various rotor and ring sieves

- 6/12/24 tooth rotor are available

PMG-100, Power Mortar Grinder

Dry Grinding / Wet Grinding / Ultra Fine Grinding / Cryogenic Grinding • Mixing • Cell disruption for DNA / RNA extraction • The PMG-100 can handle samples from 10 up to 200ml.

Method of operation

The Mortar Grinder Model PMG-100 is used to reproduce grind, homogenize and mix a wide range of solid materials in dry / wet or cryogenic condition. The material to be processed falls into the Pulverizing area between the mortar and pestle by top feeding via the opening at the inlet cover. The material is then pulverized and mixed between the mortar inner surface area and the bottom of the pestle. In order to match the necessary top pressure with the requested end fineness and the breaking behavior of the sample to be prepared the PMG-100 is equipped with adjustable.

Top Pressure Mechanism with scale and a variable speed setting of 50-130 rpm and a flexible scraper setting. Only due to the combination of this 3 key adjustment features a wide range of sample preparation tasks can be reached. No other grinding system is more easy to clean than the PMG-100 Mortar Grinder. When the grinding process is finished the mortar and pestle can be removed by a bayonet lock in order to perform a quick cleaning of the grinding tools.

Grinding, homogenizing, triturating

The Mortar Grinder is the central machine in a sample prep. This system is suitable for fine grinding of any dry substance, as well as for suspensions with different viscosities for analysis, quality control and material testing. It is perfectly suitable for the homogenization of cremes and pastes. Typically samples with a feed size of up to 8-10mm and a total batch of up to 200 ml (volume depending on the characteristic of the samples) can be ground down to 10-20µm.

High operator convenience and maximum safety

Maximum grinding performance and maximum safety is important for MRC mills. Due to an integrated safety switch the machine can only be started when the "Easy Lock Cover" is closed. The "Adjustment mechanism" allows the simple and fast settings and fine adjustment. The cover as well as the housing of the PMG-100 is made from solid steel. The ergonomic design of the machine and the front panel ensures the easy and simple setting of all working parameters.

Performance features PMG-100

Extremely easy to clean • Suitable for dry, wet & cryogenic grinding • Sample material can be added during the milling process via cover inlet • Digital time and speed setting • Precise and optimized results due to variable speed 50-130rpm • Meet all application tasks due to a wide selection of grinding tools for the mortar and the pestle • Meet all application tasks due to a wide selection of scraper materials (Vulkollan, Teflon, Beach wood) • Positioning and removal of mortar and pestle without tool • Precise and reproducible pestle setting due to scale adjustment • Solid steel housing • Optional pre-crushing for coarser materials.

Thanks to the unique combination of wide range of grinding jars made from various materials the MBM-100 is capable to practically meet all demands of today's laboratory needs.

Applications:

- Grinding (wet and dry)
- Cell disruption
- Mixing XRF Prep
- Turbulent blending (Static Mixer)
- Cold grinding

Due to the combination of high energy vibration and the punch of the grinding balls the MBM-100 can grind hard and brittle materials as well all as medium-soft, soft materials and elastic materials.

Benefits:

- Universal and highly efficient grinding, blending and disruption
- Large range of grinding jars and accessories
- Extremely short processing time
- Designed for high sample throughput
- Reproducible results by digital pre-setting of all working parameters.

**Ice bath for cryogenic grinding:**

For heat sensitive materials such as plastics and rubber it is possible to embrittle the material with liquid nitrogen and perform an additional external freezing of the fast clamping jars. Those jars are either made from Teflon or from stainless steel and are suitable for cryogenic grinding applications.

Fast clamping jars for

- Dry grinding
- Wet Grinding
- Ultra Fine Grinding
- Mechanical alloying.

**Micro vials**

PTFE, POM, pc Micro vials are used for cryogenic grinding of small sample amounts or for standard grinding applications of small samples.

**Micro vial holder for cell disruption**

- Micro vial adapter for 6 micro vials
- Micro vial adapter for 10 micro vials
- Micro vial adapter for 24 micro vials
- Micro vial adapter for 96 micro vials

Designed for high analytical screening, the MBM-100 efficiently and safely disrupts samples of spores, microorganisms, plant and animal tissue or soil samples.

The samples, along with extraction media and small metallic or ceramic balls, are placed in micro vials. After 2 minutes of preparation in the MBM-100 more than 95% of the cells are disrupted. Because the balls and the vials plates are disposable, the method is ideal for PCR, PAGE, and Probe applications where cross contamination between samples cannot be tolerated.

PBM-4, Planetary Ball Mill

MRC Planetary Ball Mills for fine grinding of soft, hard to brittle or fibrous materials

The MRC Planetary Ball Mills are used for fine grinding of soft, hard to brittle or fibrous materials. Dry and wet grinding are possible. They support the daily sample preparation for laboratory- and development usage.

Working principle:

MRC Planetary Ball Mills consist of several cylindrical grinding jars (positioned on the sun wheel as shown in the figure) which are filled with loose grinding balls. Two superimposed rotational moves the grinding jars:

Like a planetary system the grinding jar rotates on an orbit around the centre. This rotational movement is the self-rotation of the grinding container superimposed. The resulting centrifugal and acting acceleration forces lead to strong grinding effects.

As well as coriolis acceleration. The result is an intensive grinding effect between the grinding balls and the sample.

There are different rotational ratios. With a rotation ratio of 1 :-2 the grinding jar rotates twice during a sun wheel turn. The minus of this case indicate the opposite rotation direction.

Benefits:

- High efficient fine grinding up to end fineness < 1µm
- Different speed ratios available
- Grinding jars from 12ml to 500ml made from different materials
- Suitable for long-term trials and continuous use
- Automatic direction reversal to avoid agglomerations
- Reproducible results thanks to progr. grinding parameters.

Grinding jars: The selection of the right grinding jar and the correct filling level has a big impact on the grinding result. According to the application you have to select the correct material and amount/volume for the grinding jar and the grinding balls. The jar filling should consist of about 1/3 sample and 1/3 ball charge. The remaining third is the free jar volume that is necessary for the movement of the balls. The following table provides recommendations.

The movement patterns of the sample/grinding balls/can be modified according to the speed ratio between the sun wheel and the jars. One option is for sample to be slammed against the jar walls and stressed. Another option will allow for the grinding balls to roll over the sample.

Operation:

MRC Planetary Ball Mills enable the convenient programming of the following grinding parameters:

- Grinding duration in hours and minutes
- Speed
- Speed ratio (speed sun wheel: grinding jar).

Selection guide for grinding jars and balls:

We recommend always to select grinding jars and balls built from the same material.

CM-5000/CM-20,000, Cutting Mills

The CM-5000 & CM-20,000 are economically powerful cutting mills that are particularly suitable for size reduction of soft, medium-hard, elastic or fibrous materials, whose size can be reduced without requiring the use of extremely high forces.

Function Principle:

Size reduction in the cutting mill CM-5000 takes place by cutting and shearing forces. The sample passes through the hopper and into the grinding chamber where it comes into contact with a rotor equipped with 4 cutting blades; it is comminuted between the blades and the four stationary cutting bars inserted in the housing. The chamber dwell time is short; as soon as the sample can pass through the openings of the bottom sieve it is discharged and collected in the receiver. It ensures gentle, rapid and nearly dust-free size reduction. Ground product is quickly discharged by using a filter bag or a ring filter.

**Optional Knives****Features:**

- Rapid and gentle size reduction of dry materials.
- Defined final fineness by using of bottom sieves.
- The samples subjected to low thermal stress.
- Nearly dust-free comminution.
- Applications – size reduction by cutting.
- Field of application – agriculture, biology, chemistry/plastics, construction materials, environment, food, medicine/ pharmaceuticals, mineralogy/metallurgy
- Feed material – soft, medium-hard, elastic, fibrous.
- Size reduction principle – shearing, cutting.
- Material feed size – Ø50mm.
- Final fineness – 0.25–20mm.
- Sieve sizes – 0.25mm, 0.42mm, 0.84mm.
- Quick & easy cleaning.

**Main areas of Applications:**

Electronic cards, cables, computer & electronic waste, plant materials, plastics, rubber, spices, wood, drugs, feeds, foils, leather, light metal scrap, lignite, non-ferrous metals, organic & inorganic waste, paper, straw, secondary fuels, grain, seeds, resins, textiles and bones.

PCM-100, PCM-200, Power Cutting Mills

- Rapid reduction of large particles from 80 mm to 0.25 mm • Quick and easy cleaning • Full range of bottom sieves • Collector volume 5,000 ml • Digital speed setting.

Method of operation: The Models PCM-100/200 Cutting Mills is used by Laboratories & Processing Companies to granulate solid materials such as waste of wood and thermoplastics. The material to be processed falls into the cutting chamber of the mills via an upper chute and is shredded by cutting between rotating and fixed knives until it passes an attached sieve as ground product. The sieve extends over the lower half of the grinding chamber and is easily exchanged. Final particle size is determined by the selected sieve perforation aperture. No other Cutting Mill is easier to clean then the PCM-100/200 Cutting Mills. When the grinding process is finished the front door can be opened sidewise and the rotor / infeed hopper can be taken out in order to perform a fast and systematic cleaning of the grinding tools.

Ball mill is a grinder for reducing hard materials to powder. A ball mill grinds material by rotating a cylinder with balls causing the balls to fall back into the cylinder and onto the material to be ground. The cylinder rotates at a relatively slow speed, allowing the balls to cascade through the mill base, thus grinding or dispersing the materials. Ball mills are generally used to grind material 7mm and finer, down to the particle size of 20 to 75 microns.

A horizontal cylinder is rotated at a predetermined speed that sets the balls into a tumbling and cascading motion which impact the solids in a very predictable and controllable fashion. Because the process takes several hours, the particles will not only be finely milled, but will exhibit a narrow particle size distribution.

They are used widely in the chemical, paint, coatings, and ceramics industries.

- **High efficiency** – Due to the relatively slow rotational speed but large mass of media, more of the energy goes into milling and less wasted as heat.
- **Narrow particle distribution** – Solids milled in tumble mills are normally so fine and consistent in size that it's rare to require classification.
- **Repeatable results** – Mill operating parameters including rotational speed, media size and milling duration can be independently controlled with known effect on the final results.
- **Low temperature** – Because of the high efficiency of milling and low heat generation, the solids will not be exposed to high temperatures. For extremely heat sensitive products, cooling jackets can be provided on the mill cylinder.
- **Chemical containment** – Solids are sealed and contained inside the mill, protecting the environment and operators.

OSM-9, Osmometer

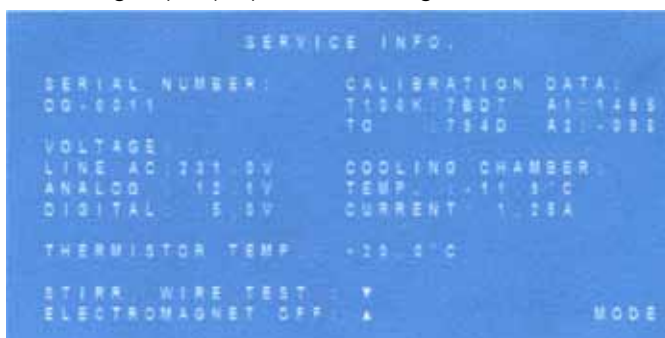

The OSM-9 is a compact micro processor controlled analyzer for easy and precise osmolality tests in samples of serum, plasma, urine or other body fluids.

OSM-9 model has hi-tech user interface:

- Observation of the sample freezing process with immediate information regards result correctness.
- Available measurement results history with printout of the single result or of many chosen measurement results.
- Active result printout description.
- Service panel with service tests.
- Displaying in Polish/English/German/French.
- Date and time setting.
- The microprocessor control and built in electronic components with high long term stability make the OSM-9 an analyzer of easy application & reliable results.

Simple operation: The OSM-9 makes the running of the osmolality test very easy. 100 μ l of the sample are Pipette into a sample tube. The sample tube is attached to the measuring head. The measuring head is pushed down into the cooling chamber. Now the measuring cycle starts automatically. When the measuring is terminated, the measuring head returns to its upper position again, and the result is digitally displayed in mOsm/kgH₂O.

measuring range	0-2000 mOsm/kgH ₂ O
accuracy	±1 mOsm/kgH ₂ O ±0.4%
precision	±1 mOsm/kgH ₂ O ±0.4%
stability	2 mOsm/kg H ₂ O/8h
measuring time	ca. 90s
dimensions	300x200x170mm
weight	6.25kg

The instrument is easy to be operate. After being placed into the measuring vessel the sample of biological fluid is pushed onto the thermistor. By pressing down the measuring head the fluid sample is introduced into the cooling section. The sample is than continuously cooled down (Peltier-effect) below its freezing point. At defined supercooling temperature the crystallization process is initiated by the stirrer. The liberated heat of crystallization causes rising the temperature of ice-liquid mixture.

The max temperature value depends on the sample osmolality. The temperature is detected and after calculations the result is displayed directly in mOsm/kgH₂O.

PF-Series, 300°C Ovens

This modern range of ovens provides a combination of excellent performance & reliability. Increased power and low thermal mass encased fibre insulation ensure both fast heat up times & reduced recovery times. Reduced holding power once at set temp., together with the insulation, makes the range economical & outer case temperatures have been significantly reduced. Both gravity & forced air circulation models are available with a wide choice of control options allowing the most critical performance criteria to be met. Where processes involve the liberation of flammable VAPORS, a stoving & curing option is available. Also, where processes involve large amounts of water, a moisture extraction option is available.

Features: The outer cases are fabricated from corrosion resistant zinc coated mild steel & finished in two tone hard wearing stoved epoxy/polyester coating. The inner case is constructed from polished stainless steel. All units are provided with non-tilt bright nickel wire plated shelves with multi-position settings for convenient loading & unloading.

Adjustable air ventilation

The chamber ventilation and exhaust vent are easily adjustable from the front control panel, on all bench top models.

Digital temperature control

The control module is able to house many variations of digital instrumentation with simultaneous display of measured and set temperature. Microprocessor based PID controllers are fitted as standard.

Economy and efficiency

Insulation around the oven chamber utilizes totally encased fibre material. This material has a very low thermal mass and thermal conductivity, ensuring very efficient insulation. This also ensures reduced holding power, making the units economical to operate once set temperature has been reached.

Door action

A flush fitting door latch with a concealed mechanism is both simple to use & provides a handle when unlatched. The lever action ensures gentle closure. The door seal design includes a newly formulated silicone compound, providing longer life & durability at maximum temp. The design also allows convenient replacement if necessary.

Control panel

The side mounted control panel avoids damage from accidental spillage.

Safety standards

All units meet the relevant European health and safety at work legislation & the performance criteria of BS 2648 & DIN 50-011. They are manufactured to comply with BS EN 61010: safety standard & also the low voltage & EMC European Directives.

Options:

- Range of over temp. protection systems in accordance with DIN12-880 Part 2.
- Stoving & curing option available for processes involving liberation of flammable vapors.

HF4-2, Horizontal Air Flow Ovens 300°C**HF4-2**

MRC High Performance Ovens are engineered to meet the most critical temperature requirements. They are designed for continuous drying operations at temperatures up to 300°C.

Factory-set over temperature protection prevents control failure from damaging contents and guards against burnout.

The Watlow controller provides a 24-step ramp and soak, 0.1°C control, multiple levels of operator access and automatic resumption of program following a power failure.

Time and temperature are displayed in a three-digit LED readout for fast and accurate setting. In addition, the sealed membrane touch-pad control panel is water and acid resistant.

Horizontal air flow provides fast heat-up and recovery & ensures rapid drying. Heated air is continuously circulated by twin turbo blowers.

Blowers also circulate air to motor bearings to prolong motor life.

Punched stainless steel shelves are adjustable on 1/2 inch centers.

Adjustable three air intake and exhaust ports can be opened for fast drying of high-moisture content samples.

The 3.5 inch thick wrap-around fiberglass insulation on all sides minimizes heat loss.

A high temperature gasket door seal eliminates air leakage and ensures longer gasket life while being subjected to extreme operational temperatures.

This unit includes long-lasting, low-watt density heating elements. It also has adjustable heavy-duty hinges & a door latch that are designed for lifetime service.

The HF4 has rugged, welded construction with a double-walled, corrosion-resistant type 304 stainless steel interior and a powder-coated exterior.

PF30-SC

PF-SC Series, 300°C Ovens For Solvents

Most vapor explosions in ovens occur when materials that can absorb large quantities of solvent are being processed; typical examples being coils & similar electrical equipment, fibre board & textiles. Every flammable solvent has a lower & upper flammable limit, & unless the concentration of the solvent VAPOR is within this range it will not explode. The range widens, for most solvents, with increasing temp. Precautions must be taken to ensure that no substantial volume of vapor/air mixture within the range of flammability can occur in the oven. It is not sufficient to permit an explosive mixture to form and attempt to obtain safety by preventing foreseeable means of ignition. The precautions must be directed towards keeping the concentration of solvent VAPOR down and this is achieved by permitting only the minimum Quantity of solvent to enter the oven and by ventilating the oven continuously in use, to dilutes the solvent VAPORS emitted to one quarter of the lower flammable limit. The "flash-point" of a substance is the temperature at which it evolves sufficient VAPOR to form an ignitable mixture with air when tested under standard conditions. Thus, if the flash point of a liquid is below the temperature of the work room it will give off VAPOR until (and beyond) the point where the whole room is full of a flammable mixture, or until all the liquid has evaporated. If the flash point is

higher than room temperature, then the liquid will never give off enough VAPOR to form a flammable mixture in the room. Low flash point solvents are thus intrinsically dangerous. However, the choice of a solvent with a high flash point will usually make no difference to the safety of the oven used to evaporate it, since the oven almost inevitably has a working temperature higher than the flash point. It is still most desirable to choose solvents with the highest possible flash points to reduce danger at the dipping, spraying and other processes prior to the oven.

Pre-Treatment: The first step should be to limit as far as possible the amount of solvent entering the oven at each loading. Particular care is needed with articles which have been dipped in paint or varnish to give a thicker coating than is usually obtained by spraying. As much drying as possible should be carried out before the articles are added into the oven. Where the process permits, it is a good practice, both for safety and economy of heat, to allow the load to remain for a short time in a semi-enclosure provided with mechanical exhaust ventilation, so that air at room temperature can remove some of the solvent. This arrangement also has the advantage that dripping in the oven is reduced, whereby the accumulation of paint and varnish residues in the oven became less of a problem.

Ventilation: Reliance on natural convection currents up the chimney is not normally an acceptable method of introducing sufficient fresh air into the oven to prevent a solvent/air explosion mixture forming. The oven should be fitted with mechanical exhaust ventilation. It is important that the exhaust draught should be applied at points in the oven where the rate of evaporation is a maximum, and that there are no dead spots in the oven space where there

is little air movement, with little dilution of the flammable VAPORS as a result. In order to improve the temperature distribution and to obtain an even flow of air throughout the oven it is normal to have some form of air recirculation. A proportion of the VAPOR and fume laden air should be extracted through a flue fitted with its own separate exhaust fan. Reliance on spillage of sufficient VAPOR and fume laden air through a rotund draught flue from the redirection system tends to be unsatisfactory. An interlock between the heat source and the exhaust ventilation is the normal method of ensuring that sufficient air is introduced into the oven for safety.

Explosion Relief & Door Fastening:

Although an oven may be provided with comprehensive precautions, explosions can still occur due to failure of components, inadequate servicing, or deliberate scotching of safety devices. The probability of fatal or serious injury to work people, or serious damage to the oven, can be reduced substantially if suitable explosion relief is provided, coupled with adequate securing of the doors of the oven to prevent their becoming missiles in the event of an explosion. It is recommended that explosion relief panels are fitted to all solvent evaporating ovens irrespective of chamber volume. These notes cover the bare essentials of the requirements for solvent evaporating ovens used in stovlng and curing processes.

The controller provides a 24-step ramp and soak, 0.1°C control, & multiple levels of operator access. A sealed membrane touch-pad control panel protects the controllers. These units also have three adjustable air intake and exhaust ducts that are easily removed for cleaning and allow the use of either room or recirculated air. A nitrogen inlet port for purging is standard to prevent contamination. MRC clean room ovens are made with 3.5 inches of high temperature, wrap-around insulation and a high-temp. silicone door gasket.

Please note that the filter may be weakened if the oven is operated above 200°C.

Analog Model For Accuracy and Economy

The Models 1407-2/1408-2 feature hydraulic thermostats & corrosion resistant stainless steel interior. A 13mm thick tempered glass observation window resists breakage under vacuum & permits easy viewing of the chamber interior. Glass viewing windows are "spring mounted" which allows the door to close squarely, thus ensuring a tight seal around the oven door. Furthermore, the door gasket has a beaded edge which also ensures vacuum integrity. Door gaskets are designed to be easily removable & interchangeable. The standard gasket supplied with all models is made of highly resistant SILICONE rubber. Also available as optional accessories are application specific gaskets. The BUNA-N gasket is available for solvent applications & is limited to a maximum temperature of 125°C. The Fluorosilicone gasket is available for applications involving acids & is limited to a maximum temperature of 200°C.

1407-2/1408-2, Small Vacuum Ovens

Vacuum ovens are used for a wide variety of vacuum drying, curing and moisture content testing. Common applications include drying heat sensitive samples, moisture determination, & drying heat sensitive samples under a controlled atmosphere.

MRC vacuum ovens are specifically designed for unparalleled performance when utilized for these, and other, applications. Since there is no air in the vacuum chamber, heat is transferred from the heating elements to the interior chamber wall, then to the shelves, and finally to the samples.

MRC Vacuum ovens maximize conductive heat techniques. To minimize conductivity resistance, ALUMINIUM shelves are provided with all MRC vacuum ovens. The oven chambers are wrapped in high temperature insulation which aids overall performance and promotes energy efficiency. MRC offers both standard ANALOG vacuum ovens with mechanical thermostat & Digital PID controlled models. Both ranges include unique design features which enhance the overall performance of the ovens. These features include durable construction with corrosion resistance stainless steel chambers, true vacuum valves, cross-flow ventilation through the oven chamber, and interchangeable door gasket for application specific use. Independent, resettable circuit breakers prevent any electrical overload.

1425-2/1445-2/1465-2, Small/Medium Vacuum Ovens

All our vacuum ovens are built with a stainless steel chamber for exceptional durability. Our double plenum design meets UL, CSA and EU safety requirements resulting in a cool outer surface. The doors on these units have positive latch handles with spring-loaded glass to facilitate a good vacuum seal without hinge binds that shorten the gasket life. A selection of gaskets (for specific applications) and a small bench top footprint increase the versatility of these ovens. The unique cross-flow ventilation forces inert gas to fill the entire chamber. To achieve required vacuum levels, users can choose from a 3/8 inch orifice or a KF25 fitting to withstand heavy use & minimize draw-down time. Maximum permitted end vacuum is 10 μ . Leak rate is 10 μ per hour.

1495D, Large Vacuum Oven

Unique Design. The 1495D Model is a general purpose vacuum oven specially designed for professional and industrial use. The combination of the oven and a ruggedly constructed mobile stand creates an ideal vacuum application station.

The stand is designed for mounting a vacuum pump at the base. All vacuum plumbing and KF25 connections are provided (vacuum pump not included).

Precision Controllers. The Watto 981 temp. controller, programmable and microprocessor-based, offers multiple ramp and soak capabilities, including storing and running up to 24 temperature profiles. The controls are easily adjustable and the control panel is user friendly. A digital vacuum gauge shows chamber vacuum level in measurements of Torr and m/Torr. The display range is 760 Torr down to 0 mil Torr. A secondary independent high limit controller provides over temperature safety protection.

Rugged Construction. High grade stainless steel construction is used for the exterior and chamber interior. Vacuum valves incorporate 3/8" brass orifices to withstand heavy use.

**Introduced Gas Saturates Chamber Uniformly.**

Our unique cross-flow ventilation design forces nitrogen or other inert gases to fill the entire chamber. Gas is forced across the greatest distance of the chamber, purging the chamber as it passes over the samples. Corrosion-resistant stainless steel tubing is used for the gas purge piping system. Use this feature to reduce effects of oxidation.

The oven chamber is wrapped in high temperature insulation which aids overall performance and promotes energy efficiency. Powder coat construction, true vacuum valves and cross-flow ventilation through the oven chamber enhance total performance. The vacuum oven is secured to a ruggedly constructed mobile stand to create a vacuum pump at the base. Although the oven is not supplied with a vacuum pump, all vacuum plumbing and KF25 connections are provided.

Tubing selection factors:

● **Chemical Compatibility –**

When transfer different fluids, the tubing should have good chemical characteristics, which is chemical compatibility. Such as: low absorption, good temperature resistance, not easy to aging, not swelling, anti-corrosion, fewer extractable. Chemical resistance decreases as temperature increases. Chemicals that have no effect on the tubing at room temperature could attack the tubing at elevated temperatures.

Chemical compatibility test method:

When the chemical compatibility of the tubing is uncertain, an immersion test is needed.

In an immersion test, a small piece of tubing is weighed, and its diameter and length are measured. The tubing then is immersed in a closed vessel with the chemical in question for a minimum of 48 hours. Afterward, the test piece of tubing is rinsed, dried, weighed and measured, and any changes are recorded. The tubing also should be examined for signs of softening or embrittlements, which indicate the chemical has attacked the tubing.

● **Pressure –**

Peristaltic pump applications typically have been limited by the pressure capabilities of the tubing. If the pressure is too high, the tubing could swell, resulting in an improper fit through the pump head, which causes excessive wear and tubing failure. The factors which affect the pressure are material, the proportion of diameter and wall thickness, etc.

● **Temperature –**

The working temperature range of a tubing material is another important consideration. Different materials have different temperature range.

● **Dimension –**

The size of the tubing has a direct effect on the amount of fluid delivered. Well-designed pumps are engineered to work with an optimum tubing size or range of tubing sizes, taking into account the tubing's inner diameter and wall thickness. The inner diameter determines the amount of fluid delivered with each turn of the rotor. The wall thickness affects the tubing's ability to spring back to its original shape

Features of peristaltic pump tubing:

- Good flexibility. Spring back after pressed radially
- Good wear abrasion resistance
- A certain extent pressure bearing capabilities
- Lower gas permeability
- Low absorption, good temperature resistance, not easy to aging, not swelling, anti-corrosion, fewer extractable.

Tubing parameters:

Inner diameter and wall thickness are the main parameters of the tubing. Different manufacturers have different notations. Such as: specification codes or inner diameter x wall thickness.

Tubing materials:

Silicon rubber, rubber, plastic, synthetic material, etc. Different materials have different characteristics and different applications.

after each compression, which has a great influence on the overall life of the tubing.

● **Dimension –**

The size of the tubing has a direct effect on the amount of fluid delivered. Well-designed pumps are engineered to work with an optimum tubing size or range of tubing sizes, taking into account the tubing's inner diameter and wall thickness. The inner diameter determines the amount of fluid delivered with each turn of the rotor. The wall thickness affects the tubing's ability to spring back to its original shape after each compression, which has a great influence on the overall life of the tubing.

● **Tubing Flex Life –**

Different tubing materials have differing abilities to withstand the repeated squeezing action of the rollers. In general, each tubing size, tubing material, pump head style, and operating speed in combination has its own life characteristics. Service life, or flex life in the pump, is the primary concern in a new application. Pump performance is very consistent in a specific application. Maximize the life of a pump system by selecting a tubing material that offers long flex life, using thicker wall tubing, and/or by operating a larger pump at slower speed.

Tubing Types which MRC Company Can Provide:

Domestic silicone tubing – Platinum-cured silicone tubing: Ultra-smooth inner liner with extremely low leachables, good flexibility, translucent and wide temperature range of -60 to 238°C.

- Specific types of above tubing refer to "Peristaltic Pump Configuration Table".

BRIX Scale (%):

The Brix degree measures the concentration percentage of soluble solid content of a sample (aqueous solution), i.e. the sum of all the solids dissolved in the water (sugar, salt, proteins, acids, etc.); the measurement result is their sum in the sample. Basically, the Brix degree is calibrated to the grams of cane sugar contained in 100 g of solution. For this reason, when a sugar-based solution is measured, the Brix degree precisely calculates real concentration. In the event of the substance to be examined also containing other components different from sugar, a referment should be a conversion table, so as to correct the obtained values and make sure the result represents the exact sample concentration.

Uses:

Projection Abbe Refractometer is a kind of instrument which can be used to determine the refractive index n_D and the mean dispersion $n_F - n_C$ for the transparent or semitransparent liquid or solid (mainly used to determine the transparent liquid).

With the help of thermostat, this instrument may be used to determine the refractive index n_D for the substance within the temp. range from 0°C to 50°C. The refractive index & the mean dispersion are important optical constants; with which the optical property of purity, concentration & dispersion power, etc. can be determined for a certain substance. Therefore, this instrument has been used widely; it is an indispensable common one used in the industries of chemicals, grease, pharmacy, painting, food processing, sugaring, etc. by relevant factories, colleges, and scientific research institutes.

REF-85

REF-85, Portable Refractometer

The REF-85 – is an optical instrument that employs the measurement of refractive index to determine the % Brix of sugar in aqueous solutions. The method is both simple & quick. Samples are measured after a simple user calibration with deionized or distilled water. Within seconds the instrument measures the refractive index of the sample and converts it to % Brix concentration units.

The REF-85 – digital refractometer eliminates the uncertainty associated with mechanical refractometers and is easily portable for measurements in the field. The measurement technique & temp. compensation employ methodology recommended in the ICUMSA Methods Book (Internationally recognized body for Sugar Analysis). Temperature (in °C or °F) is displayed simultaneously with the measurement on the large dual level display along with icons for Low Power and other helpful message codes.

Key features include: Dual-level LCD • Automatic Temp. Compensation (ATC) • Easy setup & storage • Battery operation with Low Power indicator (BEPS) • Automatically turns off after 3 minutes of non-use.

The recirculating cooler offers powerful cooling for your condenser by accurately controlling the temperature of your cooling medium down to -20°C. A recirculating cooler is not only much more powerful than conventional water cooling, but is also an ideal alternative when water consumption is an issue for economical, environmental or practical reasons.

For more information please refer to the recirculating cooler section of this catalogue.

ROVA-2L/3L, Rotary Evaporator

Rotary evaporators are distillation units that incorporate an efficient condenser with a rotary flask system. As the flask containing the solvent is rotated it continually transfers a thin layer of liquid over the entire inner surface. This gives a very large surface area for evaporation that is effected by heating from the accessory water bath. They are the ideal tools for many everyday laboratory applications, including:

- Concentration of solutions
- Reclamation of solvents
- Vacuum drying of wet solids
- Degassing liquids

The rotating system is fitted with a special seal that allows the apparatus to be placed under vacuum. This reduces the boiling point of the solvents and removes the VAPOR phase making the process much more efficient. Each unit is also provided with an easy to use vacuum release and a continuous feed system, which allows more solvent to be drawn into the rotating Florentine flask without the need to stop the operation.

Main body: button with pressure, 0-150mm lifting and falling in a high speed automatically. The rotating speed: 20-200r/min; Digital display of the speed; power: 40W.

	0A-1100-001	Metal Rocker Tray: The Non-Skid Tray for the Roto-Shake Genie attaches to the Magnetic Platform (Part No. 0A-1100-030) to rock open containers. The Non-Skid Tray measures 305 x 305mm (12 x 12in) and is included with the Roto-Shake Genie.
	SI-1150	3-D Orbital Shaker Attachment For Roto-Shake Genie: The 3-D Orbital Shaker Attachment for the Roto-Shake Genie provides gentle yet thorough mixing of dishes, flasks, beakers and open containers. It moves at a 5 degree angle through a 360 degree rotation (providing a combination of vertical and horizontal motions). This means that every corner or crevice of a container will receive complete mixing, making it the perfect choice for applications such as gel & blot staining/blocking, sample washing, polymer resin preparation, and more. Please note, platform capacity is 1 Kg (2.2 lb).
	SI-1170	Stackable Tray for Roto-Shake Genie: A tall non-skid metal tray that can be stacked onto the Roto-Shake Genie's existing tray (supplied with product) to ROCK various containers including T-flasks, petri dishes, boxes, and sealed bags, increasing the capacity for rocking by double-stacking two trays. The stackable tray measures 305 x 305mm (12 x 12in) and CAN ONLY be stacked on the non-skid tray (0A-1100-070) supplied with product.
	SI-1175	Horizontal Orbital Shaker Attachment for Roto-Shake Genie: This accessory adds horizontal orbital shaking capability to the Roto-Shake Genie with variable speed of 15–100RPM, which is ideal for Western Blots and for maintaining cells or solutions in suspension. Simply remove the Magnetic Platform from the Roto-Shaker Genie and attach the Horizontal Orbital Shaker Attachment. No tools required. Fits all new and existing Roto-Shake models.

Double Platform Large Orbital Shakers

MRC large open air shakers designed to uniformly shake hundreds of samples, day-in & day-out, under the extreme conditions of an environmental room. New engineering concepts in load balancing minimize stress & vibrations, even when fully loaded & running at the maximum speed. Accepts hundreds of samples on up to 2 accessory platforms. As pictured, platforms have easy access to all glassware, & lock in place without tools. Maintenance free, the coated tray is proof against aggressive liquids. A powerful, quiet, reliable, either for gentle shaking of liquids or vigorous mixing of materials. Optional: Digital speed control.

Unique Advantage - Precisely balanced, extremely stable shaker mechanism with massive cast-iron base need not be bolted to the floor. Four large capacity Orbital Shakers available. Both are well engineered and have heavy duty orbital mechanisms that provide smooth operation when under maximum loading and speed. The top plate is 6mm aluminium and has tapped holes to accommodate flask holders from 50ml up to the

heavy flask sizes: 1 Liter to 6 Liter. Both models feature an easy to use digital control with speed and timer display and are attractively finished in a durable grey powder coating. A specific run time can be entered or continuous running can be selected.

Reliable, day after day operation, user friendly operation, 960x480mm double platform.

This space saving two stages shakers enable to shake 2 platform simultaneously. 600 x 480mm double platform.

- Choice of THREE different units depending on preferred platform.
- Variable shaking speed with orbit REVERSING.
- Fully programmable – time, reversing time, and acceleration/deceleration rates.
- Create any mixing action from a smooth vortex to sloshing aeration (or anything in between).
- Equipped with stepper motor, delivering exceptional speed control, accuracy, and durability.
- Timer displays time or, when programmed to a defined limit, will shut off the unit.
- May be used in cold room or incubator and CO₂ environments.

Platform Options:

Orbital-Genie With Universal Ratcheting Clamps provides the flexibility for using a mix of different size and shape vessels on a single platform. Unit is supplied with two ratcheting and one non ratcheting cushioned clamps. Extra ratcheting clamps for more than two rows of smaller vessels are optional.

Orbital-Genie With Adhering Mat provides a flat platform with adhering rubber mat perfect for use with open containers. Patented material is naturally adhering. Rinse clean to renew adhering properties.

Orbital-Genie For Standard Flask Clamps is equipped with a platform for accepting various size flasks or beakers. Clamps sold separately.

Accessories: Flask Clamps (for SI-1601) are of stainless steel construction for added strength and safety. Mix & match different size clamps on same platform or all same size (capacity is indicated). Includes mounting screws. Note: Flask Clamps can also be used on SI-1701 by removing the blue Adhering Mat.

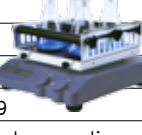

Double Sided Adhesive Tape & Adhering Mat (for SI-1601 or SI-1701) are alternatives to flask clamps for securing vessels to shaker platform. Both are ideal for containers such as bottles and dishes that cannot be held with conventional clamps. Note: Tape and Mat cannot be used on SI-1501.

**TALS-200/300/400, Sieve Shaker**

The TALS model is a multi-purpose sieve shaker that was developed at our Company and incorporates many improvements allowing it to handle most of the problems that usually arise in sieving all kinds of materials. During each development state special emphasis was put on convenience of the laboratory operator. The operating panel includes: power switch and mechanical timer for up to 30 min. The sieves are fastened to the device by rapid screws, a great time saver. The transparent cover allows observing the course of sieving.

Also the mechanical structure was highly enhanced to the point that they increase the operating power by about 30%, while at the same time reducing the noise level. The device is capable of operation in three modes: sieving, shaking and bouncing and banging. The operating power is adjustable.

Shaking: from 1000 to 3000 microns.

Bouncing: from 125 to 1100 amplitudes/min.

Banging: this action complements the bouncing and serves to "free" the mesh from irregularly shaped particles that plug up the sieve in the course of sieving.

Wet sieving is possible: liquids would be supplied through the cover and slanting bottom with a drain for collecting the liquid material.

The device is suitable for sieves from 8 to 200 mm (3", 10 cm, 15 cm, 30 cm and 45 cm sieves may also be used).

Dimensions: width: 34 cm, length: 39 cm, height: 17 cm.

Total height, including the sieve holding head is 70 cm.

Weight: about 16 kg.

SPECTRO-UV6 Series Local Control Software

All methods are included as built-in standard; this eliminates the need of software. Online software update via Internet.

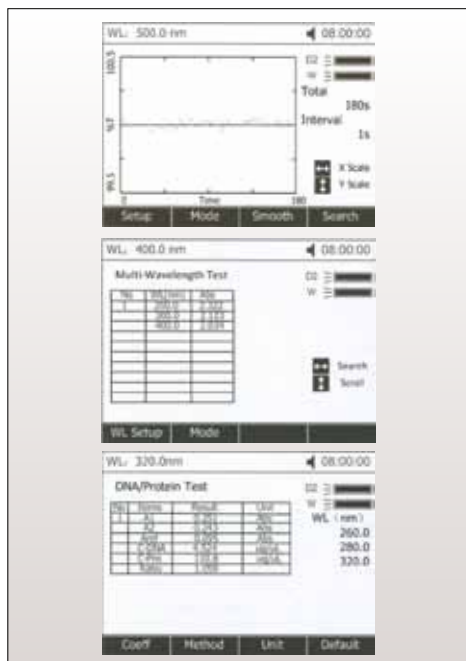

The local control software includes functions such as: Photometry, Quantitative, Wavelength Scan, Kinetics, DNA/Protein, Multi-wavelength and System Utilities.

Standard Curve-

Up to 10 standard solutions may be used to establish calibration equation curve. There is a choice of four methods for fitting curve through the calibration points: Linear fit, Linear fit through zero, square fit and cubic fit.

Wavelength Scan

The Wavelength Scan intervals are 0.1, 0.2, 0.5, 1, 2, 5nm, and High, Medium and Low scan speeds are available. Scan speeds vary from 100 to 1000 nm/min. Wavelengths are scanned from high to low so that the instrument stand-by at high wavelength. This minimizes the degradation of UV sensitive samples. Precise control of filter and lamp changes means that their effects are not seen on the final scan. Post-run manipulation includes re-scaling axes, curve tracking and peak picking.

Kinetics

This mode may be used for time course scanning or reaction rate calculations. Abs. vs. time graphs is displayed on the screen in real time. Wait time and measurement time up to 12 hours may be entered with time intervals of 0.5, 1, 2, 5, 10, 30, seconds and 1 min. Post-run manipulation includes re-scaling, curve tracking and selection of the part of the curve required for the rate calculation. Rate is calculated using a linear regression algorithm before multiplying by the entered factor.

Multi-Wavelength

Up to 10 wavelengths may be entered, allowing the measurement of multiple wavelengths on a Series of Samples.

DNA/Protein Test

Concentration and DNA purity are calculated absorbance ratios 260nm/280nm or 260nm/230nm with optional subtracted absorbance at 320nm

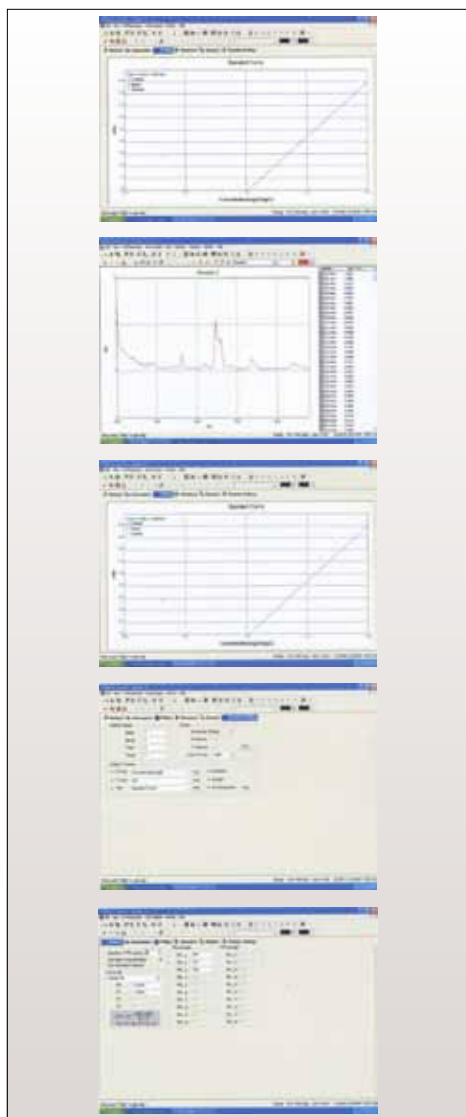

DNA Concentration = $62.9 \times A_{260} - 36.0 \times A_{280}$ Or $49.1 \times A_{260} - 3.48 \times A_{230}$

Protein Concentration = $1552 \times A_{260} - 757.3 \times A_{280}$ Or $183 \times A_{260} - 75.8 \times A_{230}$

Other wavelengths and factors may be entered.

UV/Vis Analyst for SPECTRO-UV3 & SPECTRO-UV6 Series

The MRC Windows based PC application software UV/Vis Analyst takes the best features of the stand-alone version plus more powerful data processing, expanded data collecting, and storage capability. It comes standard with PC models and is optional to stand-alone models.

The PC application software offers:

• Photometric Mode • Quantitative test (standard curve) • Wavelength Scan • Kinetics • DNA/Protein • Multi-Wavelength • System Utility.

Quantitative Test (Standard curve)

Use up to 20 standards to establish standard curve.

Four methods for fitting a curve:

- Linear fit
- Linear through zero
- Square fit
- Cubic fit

Wavelength Scan

Automatically record peaks and valleys. The quantity of channels is unlimited; you can simultaneously store as many as desired.

Post-run manipulation and processing includes:

- Re-scaling axes, curve
- 1 st to 4th derivative
- Smoothing, combination, zooming, overlap.

Kinetics (Abs vs. Time)

The Kinetics mode may be used for time course scanning or reaction rate calculations. Abs. Vs. Time graphs are displayed on the screen in real time. Waiting time, measurement time and time intervals may be entered.

Post-run manipulation includes re-scaling, curve tracking and selection of the part of the curve required for the rate calculation.

Rate is calculated using a linear regression algorithm before multiplying by the entered factor.

DNA/Protein

Concentration and DNA purity are quickly and easily calculated:

Absorbance ratios 260nm/280nm with optional subtracted absorbance at 320nm.

DNA Concentration = $62.9 \times A_{260} - 36.0 \times A_{280}$

Protein Concentration = $1552 \times A_{260} - 757.3 \times A_{280}$

Other wavelengths and factors may be entered.

Multi-wavelength

Up to 20 wavelengths can be selected and multiple samples can be measured. (Auto cell changer is required to run multiple samples automatically)

Ultrasonic Cleaner is on based of Cavitation effect caused by high frequency ultrasonic wave vibration signal in fluid.

Microscopic bubbles are formed and they implode violently that cause Cavitation, which gives out great impact to the cleaning subject and provides an intense scrubbing action on the surface of cleaning subject. Additionally, the bubbles are small enough to penetrate even microscopic crevices, cleaning them thoroughly and consistently.

Cleaning Applications:

Air brushes, spray guns • Archival papers • Automotive & aviation components • Calligraphic pens • Computer plotter pens • Dental and surgical instruments • Dentist burs • Dentures • Films • Fuel injectors • Geological & metallurgical specimens • Homogenizations • Hypodermic needles • Ink jet cartridges • Jewelry • Laboratory glassware and apparatus • Laparoscope • Lenses, other optical components • Metal/fibre filters • Metal/rubber seals • Microelectronic circuits & small components • Moulding die • Nozzles & Sieves • Printed circuit boards • Production line cleaning • Scientific & industrial instruments • Spectacle frames • Transparencies • Watches & clockwork. • Electron workshop, Glasses shop, Jewelry shop, Mobile phone, maintain shop, Hospital Dentistry, Office & household articles etc.

For intensive cleaning, degassing emulsifying, homogenization, & the acceleration of chemical processes in the research, production, and maintenance sectors.

Principle

The clean function of ultrasonic wave is to use the waves over the frequency of human hearing conducting within the liquid. When ultrasonic waves, longitudinal waves, are conducting within the cleaner, which pushing function for the medium will enable the pressure within the liquid to change and produce mini vacuum bubbles referred as Cavitation. When gas bubbles are pressed to break, they will produce so great excitation energy as to separate the dirties stacked to the dead corner of object as well as to enhance clean effect of cleaner. With high frequency, short wave length and strong penetrating power, so that it can completely clean the article having hidden seam or complex structure.

SONIC Series

SONIC Series, Ultrasonic Cell Disrupter Homogenizer:

It is also called Ultrasonic homogenizer, processor or disrupter. A Sonicator system is comprised of 3 major components: Generator, Converter and Horn (also known as a probe). The new model of the SONIC features: Series is integrated with Temperature Monitor optional. LCD display screen clearly displays all operating parameters and options: Temperature, time, output power etc. Temperature monitor to protect sample from overheating.

Features:

Full amplitude control: Amplitude (intensity) can be set from 1–100% giving a greater degree of resolution and the ability to pinpoint the amplitude needed to effectively process your sample.

Programmability: Parameters including processing time, pulse on/off and power output, it can be saved to memory and run by the touch of a button. This new system can store more than 50 custom programs.

Pulse mode: Adjustable pulse On and Off times to reduce the heat gain in temperature sensitive samples.

Auto tuning: The Sonicator digitally tracks frequency changes in the converter/ tip assembly caused by load and temperature changes and maintain electrical efficiency at all times. Manual tuning is unnecessary.

Temperature monitoring: An optional temperature probe is available for those customers who wish to monitor the temperature of their sample. If the temperature limits reached, sonication shuts down to prevent overheating.

Applications:

Biological / Biotech: Sonication is an ideal tool for lysing bacteria, yeast and tissue cells for the extraction of protein, DNA, RNA, and cellular components. DNA shearing (ChIP Assay) is a very common application.

Pharmaceutical: Cell disruption is common in analytical, quality control, and R & D labs to perform numerous functions from mixing and degassing of analytical samples, to cracking open tablets for dissolution tests. Liposomes and emulsions are easily formed by Sonication for microencapsulation purposes in the production of creams and lotions.

Chemical:

Sonication accelerates both physical and chemical reactions. Major advances in sonochemistry include chemical synthesis of catalysts and new alloys, catalyzing organometallic reactions, micro-encapsulation of protein and hydrolyzing esters. The use of sonication provides greater yields, increases overall efficiency, and saves energy.

Industrial:

Industrial uses include forming emulsions, catalyzing reactions, extracting compounds, and reducing particle size. Continuous.

Environmental:

Sonication is used by environmental testing labs to process soil and sediment samples. Sonication takes just 8–10 minutes per sample versus 4–18 hours by soxhlet extraction, it uses half the solvent and improves yields.

Optional:

Standard Probes – Probes are made from titanium and machined to specific sizes and shapes. When driven at their resonant frequency, they expand and contract longitudinally. This mechanical vibration is amplified and transmitted down the length of the probe. In liquid, the probe causes cavitation which constitutes the main mechanism for sample processing. Choosing the appropriate horn is extremely important. The sample volume to be processed is directly related to the tip diameter.

Cup horn/probe – Cup horn for ultrasonicator :

This indirect Sonication eliminates the need for a probe to come in contact with your sample. This technique is often described as a high intensity ultrasonic bath. The ultrasonic energy is transmitted from the horn, up through the water and into a vessel or multiple sample tubes. Indirect sonication is most effective for very small samples because foaming and sample loss are eliminated. Pathogenic or sterile samples are ideal for this method because aerosols and cross contamination are prevented. The Cup Horn and Microplate Horn deliver indirect sonication and are ideal for many high throughput applications.

Microtube holder – up to 2–8 samples (0.1–2ml) can be treated simultaneously. Pressure plate holds tubes in place. Avoid contamination by toxic samples.

continuous cell flow – 316 stainless steel with double walls through which cooling water can circulate, This flow cell allows for 10 L per hour sonication. It works with 10–20mm probes; and with 950w to 2000w sycon ultrasonic processors.

VT-03E/04E, Viscotesters

This product is designed for a wide range of viscosity measurements. It is suitable for checking industrial substances such as heavy oil, paint, and adhesives. It can be used for quality control in manufacturing processes of foodstuffs and other products. When inspecting construction vehicles and other machinery, the unit can serve to measure not only the viscosity of hydraulic oil but also of tight spindle oil, gear oil, etc. The unit employs the rotating cylinder principle. A rotor turning at constant speed is inserted into the liquid to be measured. The resistance to rotor movement caused by the viscosity (torque) is measured using a special mechanism to obtain direct readings in millipascal-seconds (mPa.s) or decipascal-seconds (dPa.s).

- Compact size, can be operated with one hand.
- Battery powered design allows use anywhere.
- Quick startup shows readings immediately after turn-on.
- Direct readings in millipascal-seconds or decipascal-seconds (SI-units).
- Stand and AC adapter available as options.

VT-05/06, Uni-Cylinder Rotational Viscotesters

The VT-05/06 is designed for quality control applications in the manufacturing process of industrial products such as petrochemicals, paint, and adhesives, as well as foodstuffs. Viscosity measurements covering a wide range are possible, such as gear oil used in construction machinery. Measurement is performed by simply submerging a rotor in the fluid. The resistance to rotor movement caused by the viscosity (torque) is measured to obtain direct readings.

- Compact and light weight make the unit easily portable and allow operation with one hand.
- Can be powered by alkaline batteries, nickel-Hydride rechargeable batteries, or AC adapter.
- Direct indication of viscosity in millipascal-seconds or decipascal-seconds (SI units).
- Dedicated stand for measurement available as option.

Usage

1. Attach rotor to unit and hold unit in the hand or place on dedicated stand. (Unit should be approximately horizontal in either case.)
2. Insert rotor in sample fluid, turn power on, and select rotor number.
3. Press start button and read indicated viscosity.

* VT-06 allows use of No. 1 rotor, No. 2 rotor, and supplied extension rod to reach fluid at a greater distance.

Why choose our glassware washer?

Vast range of washing accessories:

MRC offers a vast range of specific trolleys and accessories for washing glassware in chemical, pharmaceutical and petrochemical laboratories. They are made of AISI 316L or 304 steel and of chemical refractory and heat-resistant materials. The combination and choice of the various accessories depend on the type and quantity of glassware to be washed. Particular attention has been paid to shapes and sizes in order to ensure that the accessories are easily interchangeable. The water intakes are automatically coupled to the internal drying air ducts when the door is closed.

All the accessories are dimensionally compatible with the various models.

Automatic washing:

The automatic washing process of the MRC glassware washers guarantees extremely high performance quality ensuring excellent controllable results, verifiable and repeatable over time.

Automatic washing allows achieving impeccable results and the margin of error is reduced to a minimum.

The efficiency and thoroughness of automatic washing guarantee an impeccable result and effective disinfection even for the most complex and delicate materials. The risks of damaging the material are eliminated resulting in a longer life and guaranteeing perfect drying.

Wastewater separation:

The MRC models can be equipped with a wastewater separation system. This allows separating the washing wastewater full of potentially polluting substances from the rinsing water containing a negligible concentration of pollutants and can therefore be drained into the normal sewerage.

Disinfection:

The MRC disinfection machines guarantee impeccable washing and effective disinfection of also complex and delicate instruments.

The WG-2045, WG-1060, WG-4060, WG-3060 and WG-4090 models are equipped with automatically regenerated washing water softeners and use freshly drawn water in every phase.

Controlled detergent dispensing system:

Washing effectiveness is first and foremost based on proper execution of the detergent and neutralizing phases of the material treated.

The models WG-2045, WG-1060 and WG-4060 are equipped with a dispenser for alkaline powder and a peristaltic pump for the acid neutralizer. While the WG-3060 and WG-4090 models have two peristaltic pumps, respectively dedicated to feeding alkaline detergent in the washing phase and acid-based neutralizer in the neutralization phase. Each pump is equipped with a level sensor to be positioned directly in the can of the products used.

The machines are designed to dispense up to 4 different additives. Liquid alkaline detergents, new enzyme-based detergents or acid-based neutralizers, caustic soda, disinfectants and/or defoaming additives can be used.

Programmable washing cycles:

The heart of the new-generation MRC disinfection machines is the ultra modern control system with microprocessors that control every activity carried out and monitor (by means of redundant system) the entire flow of information processed by the machine.

The entire WG Series offers the possibility of programming all the washing parameters by means of a multifunction membrane keyboard or directly from the PC thanks to the RS232 and the software.

All the most significant parameters can be set, for example: execution times, operating temperature, additive quantity, number of phases. Access to the control operations is protected by a system of four user passwords.

**WG-2045, Basic Washer**

WG-2045 is a glassware washer with reduced dimensions projected to work at 1 or 2 washing levels and to treat substances of different nature. Washing chamber 380x480x580 mm. Possibility of washing and disinfecting.

This is an ideal solution for washing various types of glassware simultaneously without having to use dedicated separate carriages with a greater capacity.

LPM24 carriage.

Two spraying/injection levels

In this configuration there are two washing levels: the upper level is fitted with the KP60 seventy-item base for centrifuge vials and test tubes. The lower level is spare.

Photo:

D-CS1 upper rack: KP60 base.

D-CS2 lower rack: SB9 straight tine support for beakers and flasks to the left, SB14 spring tine support to the right.

Two injection levels

LM46 carriage consisting of two injection levels for a capacity of 46 items. This version maximizes the injection washing capacity. The maximum height of glassware is 225 mm.

Recommended for flasks (ISO1042) with volume of 5 to 200 ml, bottles (ISO 4796) up to 1000 ml and flasks up to 1000 ml.

LM46 carriage composed by 22-position upper rack and 24-position lower rack.

Two spraying levels

Standard lower basket CS2 and upper basket with sprayer CS1-1. In this configuration there are two washing levels with rotary sprayers where all the supports for the various glass items can be positioned (it can be used for washing beakers, test tubes, flasks, plates and various other materials). The upper basket CS1-1 can be positioned on two levels to make better use of the space.

Two spraying/injection levels

Standard lower basket CS2 and upper injection basket. In this configuration there are two washing levels: a lower level with rotary sprayers to hold various supports (beakers, test tubes, flasks) and an upper level with a 40-position injection trolley LM40S (LM40SDS for machines with drying system).

This configuration allows simultaneous washing of narrow-necked and other types of glassware.

One spraying/injection level

LM20 trolley (LM20DS for machines with drying system) one half with a multi-spigots injection system and the other half to hold supports. In this case, narrow-necked glassware up to 500 mm in height can be washed at the same time as test tubes. Compared to the configuration with two spraying/injection levels, this one has the advantage that you can wash glassware more than 245mm in height.

One injection level

LM40 trolley (LM40DS for machines with drying system). It may be considered as a universal injection trolley as it optimizes washing of narrow-necked glassware of different sizes. It has a capacity of 40 items and can wash both large items and small flasks or bottles.

Two injection levels

LM80 trolley (LM80DS for machines with drying system) with two injection levels for a capacity of 68 items. This version maximizes the injection washing capacity.

One mixed injection level

LPM20/20 trolley (LPM2020DS for machines with drying system): this system allows simultaneously washing narrow-necked glassware (flasks, beakers, round-bottom flasks) and 20 pipettes. It is a valid solution when needing to wash many different types of glassware at the same time without having to resort to a specific larger capacity trolley.

Detergents & Additives

To achieve excellent washing results and optimize the thermal disinfection of laboratory instruments, specific detergents should be used. MRC has a complete range of alkaline detergents (for use during the washing phase) and neutralizing acid detergents (for use during the neutralization phase) especially designed to guarantee efficient cleaning and optimize the efficiency of the final thermal disinfection phase. MRC also has numerous disinfectants designed for thermolabile instruments and anaesthesia tools for use in the machine during the thermo chemical cycle, as well as special lubricants and additive that can lengthen the lifetime of the medical devices.

Water Treatment

To obtain high quality washing standards, it is fundamentally important to use correctly treated water. In the prewash, washing and neutralization phases, softened water should always be used. Models WG-2045, WG-1060, WG-4060, WG-3060 and WG-4090 range have an efficient built-in decalcifier capable of reducing the hardness of the supply water so as to prevent the classic formation of whitish stains inside the chamber and on the instruments.

MRC also supplies a range of high-performance WS water softeners which are compact and easy to install. Equally important is the rinsing of the instruments with demineralized water in order to eliminate any contaminants remaining in the washing chamber. For this purpose, MRC has the compact and efficient WP3000 mixed resin bed demineralizer.

WP3000

Resin column water purifier

The WP3000 water purifier is used to produce deionised water at 0.8–1µS/cm, suitable for the final rinsing of instrument washers. The system uses mixed bed resins (disposable) which can also retain silica. When the resins run out, they can simply be replaced with the MI700WP kit. The resin cartridge is made out of stainless steel, as is the entire machine.

Net capacity of cartridge: 15Liters.
Dimensions: l x d x h = 300x600x850mm.

MI700WP Anion/cation mixed bed resins kit for the WP3000 water purifier. Total exchange capacity 42700 Liters/°F# end of cycle at 5µS/cm ("Hardness in French degrees). Supplied with used resin disposal bag.

WS9E, WS11E, WS14E, WS17E

Water treatment systems

The WSE Series of appliances are technological water softeners capable of completely eliminating lime from water.

The resins are regenerated using normal sodium chloride. Available in versions with flow rates of up to 2700 Liters/hour. The models are fitted with an electronically controlled head which can be programmed depending on the hardness of the water. They provide backflow regeneration based on the volume of water (bearing in mind the resin saturation rate) and proportional brine in order to optimize water and salt consumption.

PROGRAMMABLE:

The heart of the new generation of MRC disinfectors is the leading-edge management system controlled by microprocessors which can control at all the activities performed & monitor, using redundant systems, the entire flow of information processed by the equipment. The entire WG Series allows operators to programme all washing parameters as they prefer, using the multi-function membrane keypad or the PC directly via the RS232 or LAN connections & the WD-TRACE software ®. All significant parameters can be set. These include: execution times, operating temp., quantity of additives, number of phases, and so on. Access to the control operations is protected by a system of four user passwords.

DRYING SYSTEM:

The forced-air "Drying System", completely modified in the new WG Series, is a high-performance rapid drying system. The system, comprising an efficient hot air generator & a powerful fan, is directly managed by the programmer which allows both operating time and temperature parameters to be modified. The microprocessor assures "intelligent" management of the drying circuit by automatically adjusting fan speed (thereby reducing power consumption) according to the temperature measured in the washing chamber. The air intake passes through a class C filter with a 98% efficiency rating.

PERISTALTIC PUMPS DETERGENT AND NEUTRALIZER:

Disinfection effectiveness mainly depends on the correct performance of the washing phases and the neutralization of the treated material. Models WG-3060 and WG-4090 feature two peristaltic pumps dedicated to dispensing the alkaline detergent during the cleaning phase and the acid neutralizer during the neutralization phase respectively. Each pump is equipped with a level sensor to be positioned directly in the can of the products used. About the models WG-2045, WG-1060 e WG-4060, it is possible to install a specific optional pump to dispensing the alkaline detergent.

ADDITIONAL PERISTALTIC PUMPS FOR ADDITIVES:

The new WG models can have up to two additional peristaltic pumps dedicated to dispensing additives (caustic soda, defoamers, inhibitors, disinfectants). Each pump is equipped with a level sensor to be positioned directly in the can of the products used. system of four user passwords.

DETERGENT STORE:

Ergonomics, reduced dimensions and practicality are indispensable requirements for all equipment used in busy professional surroundings. With these requirements in mind, MRC has designed a detergent store located inside the reduced dimension of the glassware washer itself. It can contain up to four 2-Liter containers for the WG-4090 Series and four 5-Liter containers for the WG-6090 Series. No product feed pipes project from the volume of the glassware washer.

LAN CONNECTION:

Thanks to the dedicated MRC WD-TRACE software ® it is possible to visualise each piece of equipment as though it were a terminal, thus being able to store all the machine data directly on PC. As information communication is two-way, it is possible to directly dialogue with the disinfectant microprocessors, for example, in order to change the cycle parameters or display a chart of internal temperatures.

PRINTER:

The traceability of the washing and thermal disinfection cycles performed in professional glassware washers is required in order to check the operations have been successfully completed. The printer is an accessory which can provide a detailed report containing all information relative to cycle performance. In both the free-standing and panel versions, the thermal printers used in the WG Series provide complete supporting documentation for operators.

CONNECTION RS232:

A significant feature of the new-generation equipment is that it incorporates the devices required for the complete communication of data relative to completed processes. The range of last-generation WG features two standard RS232 outputs, one for connection with the printer and the other for connection with the PC in order to download all the information relative to completed washing and disinfection programmes.

THE PARAMETER Ao:

Is a numerical value deriving from an equation that directly relates two fundamental parameters: temperature and thermal disinfection time. Basically, the value of Ao defines the level of lethality of the process expressed in seconds. The value appears directly on the display and, if a printer is installed, it is also included in the end-of-cycle report.

STEAM CONDENSER:

The steam condenser rapidly reduces the saturated steam from the washing water, especially during the thermal disinfection phases. This device eliminates the formation of condensation near the glassware washer and prevents humidity and smells from escaping into the air, especially in the versions positioned underneath worktops. In air-conditioned rooms moreover, limiting the dispersion of heat from the glassware washer reduces the work load of the air-conditioning system, considerably decreasing electricity consumption and unwanted temperature changes.

Applications:

- Metal welding: lead-tin soldering, gold, silver, copper, brass brazing, for spot & plate welding, such as ear-ring, necklace, chains, finger ring, etc.
- Glass process: ampoule sealing, quartz glass process, mercury switch sealing, glass capillary tube forming, bending, etc.
- Motor industry: stator copper-thread welding and no need to peel the cover.

FWW-Series, High Temp. Flame Water Welders

Just add di-water & plug the plug. Then you can get the mixed gas of hydrogen & oxygen which pass through the fan to condense water vapor. The functions of booster are to add the enthalpy, to reduce the flame temperature, to rise the pressure of gas and to increase the energy. It's a very economical method to have a hi-temperature flame.

Features:

- Fuel are water, electric power & a little of solvent. Easy to get and storage safety.
- $2H_2 + O_2$ burn $2H_2O$ (vapor). the vapor left from burning is non toxic and non pollution.
- Good designed machine constructor, for continuous operation.
- Torch with built-in diffusion stone, pressure switch, over-pressure relieve valve, to protect the machine absolutely safety.
- Flame temperature range is up to 3420°C or can be down to 1200°C .
- Easy to change the flame size especially in very fine flame usage area. Tip orifice size are from 0.076mm <(30#) to 1.056mm (16#).
- Compact and easy operation.

Booster's Function Diagram

- Hi-melting point metal welding: thermal couple thread welding, led plate connecting, computer stripping teflon tape cable cover peeling and cutting. gold wire ball bonding.
- Sun glasses hinge's welding.
- Acrylic surface or edge flame polishing.
- Tooth mold pin hole mending.
- Lead acid battery electrode plate welding.
- Heat treatment for small part and precise craft.

TCW-60, Thermocouple Welder

The TCW-60 is designed for sensor manufacturers for the production of commercial grade thermocouple junctions, and for users of large numbers of exposed junction thermocouples such as test & development laboratories where multipoint temperature sensing of test pieces is required.

No special skills are needed and most people will be capable of producing quality work with minimal practice. The instrument can be operated via the front panel or by using the footswitch provided.

In addition to thermocouple work, the TCW-60 welder is used in many other applications involving the joining of wires to each other and to metal surfaces.

This model is suitable for welding wires up to 1.1mm diameter & has an argon gas shield facility.

A satisfactory thermocouple junction is produced without using argon, but where argon is available a momentary purge is automatically triggered immediately prior to the weld to give optimum weld integrity.
